

# LINKED OPEN DATA FOR CULTURAL HERITAGE

VLADIMIR ALEXIEV

[VLADIMIR.ALEXIEV@ONTOTEXT.COM](mailto:VLADIMIR.ALEXIEV@ONTOTEXT.COM)

2016-09-29

2D presentation: [O](#) for overview, [H](#) for help, normal continuous HTML

# TABLE OF CONTENTS

- 1. Intro
  - 1.1. GLAM vs Internet
  - 1.2. Google NGrams: Phrases in Books
  - 1.3. Google NGrams: Two Specific Orgs
  - 1.4. Google Trends: Search Popularity
  - 1.5. How To Survive in the Internet Age?
  - 1.6. Why Linked Open Data (LOD) is Important
- 2. GLAM Content Standards
  - 2.1. Museum Content Standards
  - 2.2. Archival Content Standards
  - 2.3. Library Content Standards
- 3. GLAM Metadata Schemas
  - 3.1. Seeing Standards (2)
  - 3.2. XML Schemas
  - 3.3. Museum Metadata: CDWA
  - 3.4. Archive Metadata
  - 3.5. Library Metadata: MARC
- 4. GLAM Ontologies
  - 4.1. Europeana Data Model
  - 4.2. CIDOC CRM
  - 4.3. Web Annotation (Open Annotation, OA)
  - 4.4. International Image Interop Framework (IIIF)
  - 4.5. Library Ontologies
  - 4.6. Archival Ontologies
- 5. GLAM LOD Datasets (LODLAM)
  - 5.1. Wikidata
  - 5.2. VIAF
  - 5.3. Global Authority Control
- 6. LODLAM Projects

# 1 INTRO

- A bit about me: co-founder of Sirma Group Holding, Bulgaria's largest software group and parent company of Ontotext
  - 30y in IT: 8 at university, 22 in industry
  - Did plenty of project management, business analysis and data modeling, some big projects too
  - Last 8 years focused on data modeling and integration
  - Last 6 years in particular, focused on semantic data and semantic integration
- I love to poke in other people's data and get in-depth. So there's a lot about data in these slides
- See [My publications](#): you can sort by type and keyword, full abstracts are available.
  - I've provided a few references below, but if a topic interests you, please search in the publications
- The shorter version has about 110 slides, so sit back, relax, and enjoy the ride. Should take us 1:20h
  - Ask questions at any time in the chat, I'll answer them all at the end
- This longer version has 130 slides, including info about Library metadata and ontologies

# 1.1 GLAM VS INTERNET

GLAM, CH, DH?

- **Cultural Heritage (CH):** the sum of our non-economic heritage
  - Obvious implications to economically significant sectors, eg tourism
  - Some say it's the source of all creativity, would you agree?
  - Includes old and new (eg digitally-born), material and immaterial, tangible and intangible, permanent and temporal (eg interactive installations)
- **Galleries, Libraries, Archives, Museums (GLAM):** sisterhood of institutions that care for our CH, each with its own perspective and priorities
- **Digital Humanities (DH):** the use of computers in the humanities.
  - Eg some UK universities with DH programs: @KingsDH @UCLDH @DH\_OU @CamDigHum

## 1.2 GOOGLE NGRAMS: PHRASES IN BOOKS

Search for "library, museum" vs "Google, Facebook, Twitter" in books: the web sites are negligible

## 1.3 GOOGLE NGRAMS: TWO SPECIFIC ORGS

Compare two specific orgs: "Facebook" is more popular in recent books, compared to "British Museum" over time

# 1.4 GOOGLE TRENDS: SEARCH POPULARITY

Web searches over the last 12 years: "Facebook, Google" are much more popular than "library, museum"

## 1.5 HOW TO SURVIVE IN THE INTERNET AGE?

Since ancient times GLAMs have been the centers of knowledge and wisdom

- Aren't Google, Wikipedia, Facebook, Twitter and smart-phone apps becoming the new centers of research and culture (or at least popular culture)?
- Will GLAMs fall victims to teenagers with smartphones browsing Facebook? If the library's attitude is "Come search in our OPAC" then **certainly yes**
- How to preserve the role of GLAMs into the new millennium?

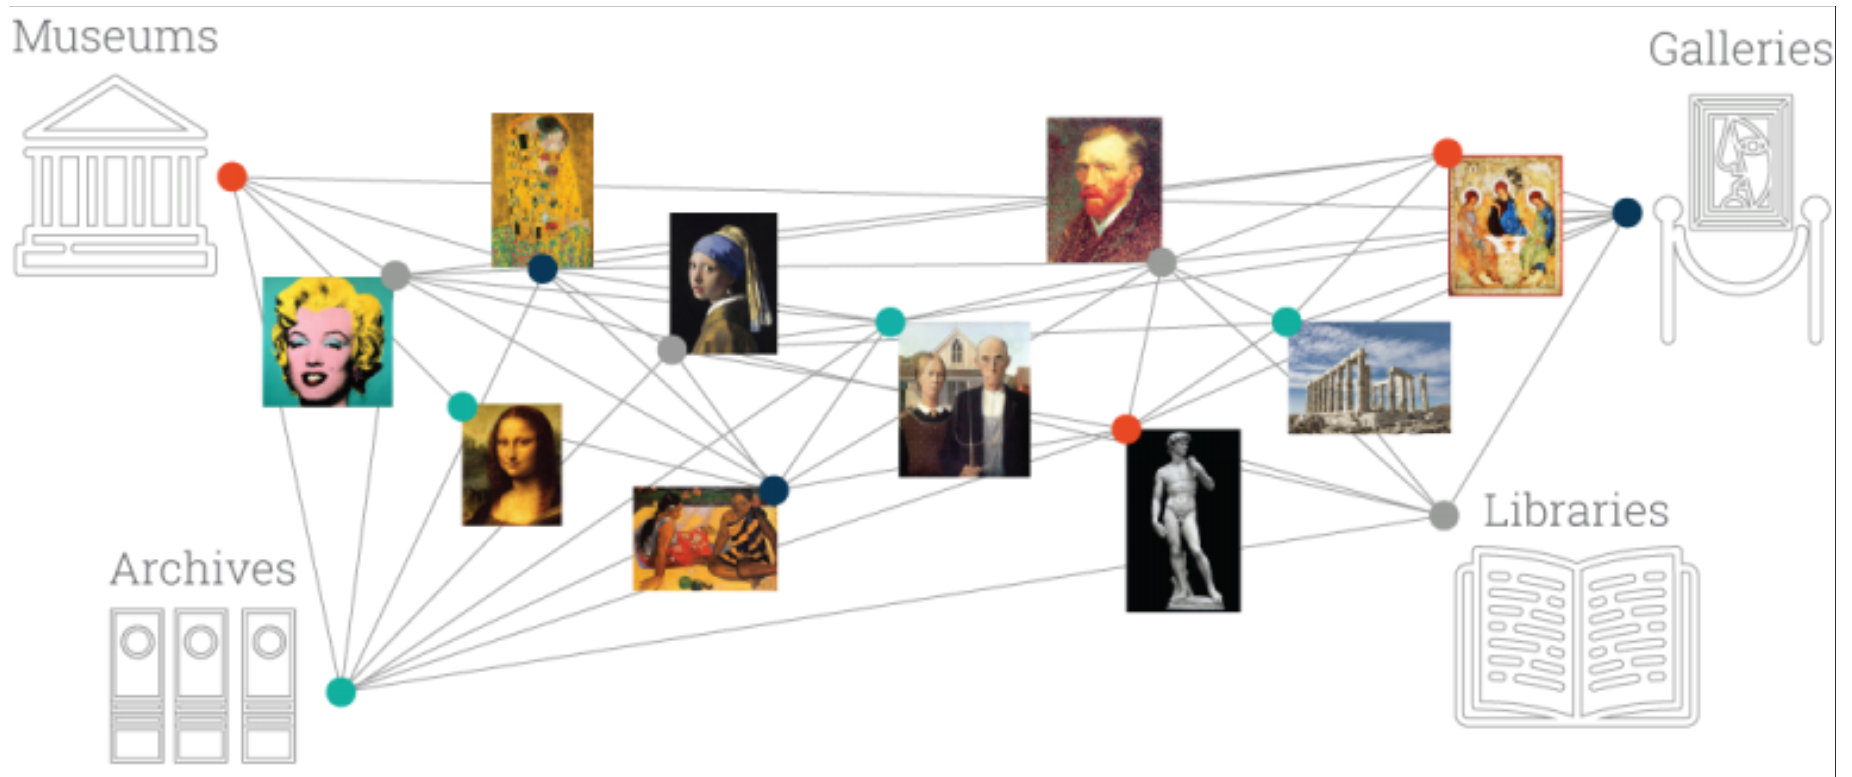

To survive, GLAMs must adopt the internet as their default modus operandi

- Web 1.0: presentation
- Web 2.0: interaction
- Web 3.0 (semantic web): data linking, enriching/disambiguating text using NLP/IE approaches

## 1.6 WHY LINKED OPEN DATA (LOD) IS IMPORTANT

- Culture is naturally cross-institutional, cross-border, multilingual, and interlinked
- LOD allows making connections between (and making sense of) the multitude of digitized cultural artifacts available on the net
- LOD enables large-scale Digital Humanities research, collaboration and aggregation; technological renewal of CH institutions

# 2 GLAM CONTENT STANDARDS

GLAM data is complex and varied

- Exception is the rule
- Many metadata format variations
- Data comes from a variety of systems

Thus professional organizations have found it useful to define **content standards**

- Describe what data to capture (and sometimes how to go about it)
- Before formalizing how to express it in machine-readable form

Examples are extremely useful for data modelers to decide how to map the data

## 2.1 MUSEUM CONTENT STANDARDS

Cataloging Cultural Objects: content standard for art, architecture, museums

## 2.1.1 CCO EXAMPLE: ARTWORK AND CREATOR RECORD

**Figure 14**

Work Record Linked to a Personal and Corporate Name Authority Record: Oil Painting<sup>3</sup>

*Required and recommended elements are marked with an asterisk.*

Work Record	Personal and Corporate Name Authority Record
<ul style="list-style-type: none"><li>■ <b>Class</b> <i>[controlled]</i>: paintings • European art</li><li>■ <b>*Work Type</b> <i>[link]</i>: painting</li><li>■ <b>*Title</b>: Landscape with Classical Ruins and Figures I <b>Title Type</b>: preferred</li><li>■ <b>*Creator display</b>: <u>Marco Ricci</u> (Italian, 1676-1730), figures by Sebastiano Ricci (Italian, 1659-1734)<ul style="list-style-type: none"><li><b>*Role</b> <i>[link]</i>: painter   <b>Extent</b> <i>[controlled]</i>: landscape architecture   <i>[link]</i>: Ricci, Marco</li><li><b>*Role</b> <i>[link]</i>: painter   <b>Extent</b> <i>[controlled]</i>: figures   <i>[link]</i>: Ricci, Sebastiano</li></ul></li><li>■ <b>*Creation Date</b>: ca. 1725/1730 <i>[controlled]</i>: <b>Earliest</b>: 1720; <b>Latest</b>: 1735</li><li>■ <b>*Subject</b> <i>[links to authorities]</i>: landscape ruins • human figures • Dionysos (Greek deity) • Classical architecture</li><li>■ <b>Culture</b> <i>[link]</i>: Italian</li><li>■ <b>*Current Location</b> <i>[link]</i>: J. Paul Getty Museum (Los Angeles, California, United States)   ID: 70 PA 33</li></ul>	<ul style="list-style-type: none"><li>■ <b>*Names</b>:<ul style="list-style-type: none"><li>Ricci, Marco (preferred, inverted)</li><li><u>Marco Ricci</u> (preferred, natural order)</li><li>Richi, Marco</li><li>Ricci, Marchetto</li><li>Rizzi, Marco</li><li>Rizi, Marco</li></ul></li><li>■ <b>*Display Biography</b>: Italian painter, 1676-1730</li><li>■ <b>*Nationalities</b> <i>[controlled]</i>: Italian • Venetian</li><li>■ <b>*Birth Date</b> <i>[controlled]</i>: 1676; <b>Death Date</b>: 1730</li><li>■ <b>*Life Roles</b> <i>[controlled]</i>: painter • draftsman</li><li>■ <b>Place of Birth</b> <i>[link]</i>: Belluno (Veneto, Italy)</li><li>■ <b>Place of Death</b> <i>[link]</i>: Venice (Veneto, Italy)</li><li>■ <b>Places of Activity</b> <i>[link]</i>: Veneto (Italy), England</li><li>■ <b>Related People</b>:<ul style="list-style-type: none"><li><b>Relationship Type</b> <i>[controlled]</i>: brother of <i>[link to related person]</i>: Sebastiano Ricci (Italian, 1659-1734)</li></ul></li></ul>

## 2.1.2 CCO EXAMPLE: HIERARCHICAL LINK BETWEEN 2 ARTWORKS

**Figure 13**

Work Record Linked to Another Work Record: Medieval Cathedral and Its Portal  
*Required and recommended elements are marked with an asterisk. Figure shows a hierarchical link between a building and a component of that building.*

### Work Record

- **Class** *[controlled]*: architecture
- **\*Work Type** *[link to Concept Authority]*:  
[portal](#)
- **\*Title**: Portal (South Transept) | **Title Type**: preferred
- **\*Creator display**: unknown French
  - \***Role** *[controlled]*: architects | *[link]*: unknown French
- **\*Creation Date** ca. 1205-ca. 1240  
*[controlled]*: **Earliest**: 1200; **Latest**: 1245
- **\*Subject** *[link to authorities]*: portal • Last Judgment  
• Jesus Christ • martyrs • confessors • Saint Martin  
• Saint Nicholas
- **\*Current Location** *[link]*: South Transept, Chartres Cathedral, Chartres (Eure-et-Loir, Centre region, France)
- **\*Materials and Techniques**: limestone
  - Material** *[link]*: limestone
- **Styles** *[link]*: Gothic
- **Description**: The central portal depicts the Last Judgment; left portal portrays the Martyrs, tympanum portrays the martyrdom of St. Stephen; right portal portrays the Confessors, tympanum portrays good deeds of St. Martin and St. Nicholas.

### Related Work:

**Relationship Type** *[controlled]*: part of  
*[link to Work Record]*: Chartres Cathedral;  
cathedral; unknown French; begun 1194,  
consecrated 1260; Chartres (Eure-et-Loir, Centre  
region, France)

## 2.1.3 CCO EXAMPLE: CREATOR EXTENT

How to describe one aspect of the data

### ***For Creator Extent***

Record the part of a work contributed by a particular creator, if necessary for clarity. Some examples of terminology follow:

execution	with additions
design	figures
predella	embroidery
cast	printed

---

### *Examples*

**[for a painting]**

**Creator display:** figures by Peter Paul Rubens (Flemish, 1577-1640), landscape and still-life objects by Jan Brueghel the Elder (Flemish, 1568-1625)

**Controlled fields:**

**Role:** painter

**Extent:** figures

*[link to Personal and Corporate Name Authority]:*

Rubens, Peter Paul

**Role:** painter

**Extents:** landscape • still life

*[link to Personal and Corporate Name Authority]:*

Brueghel, Jan, the Elder

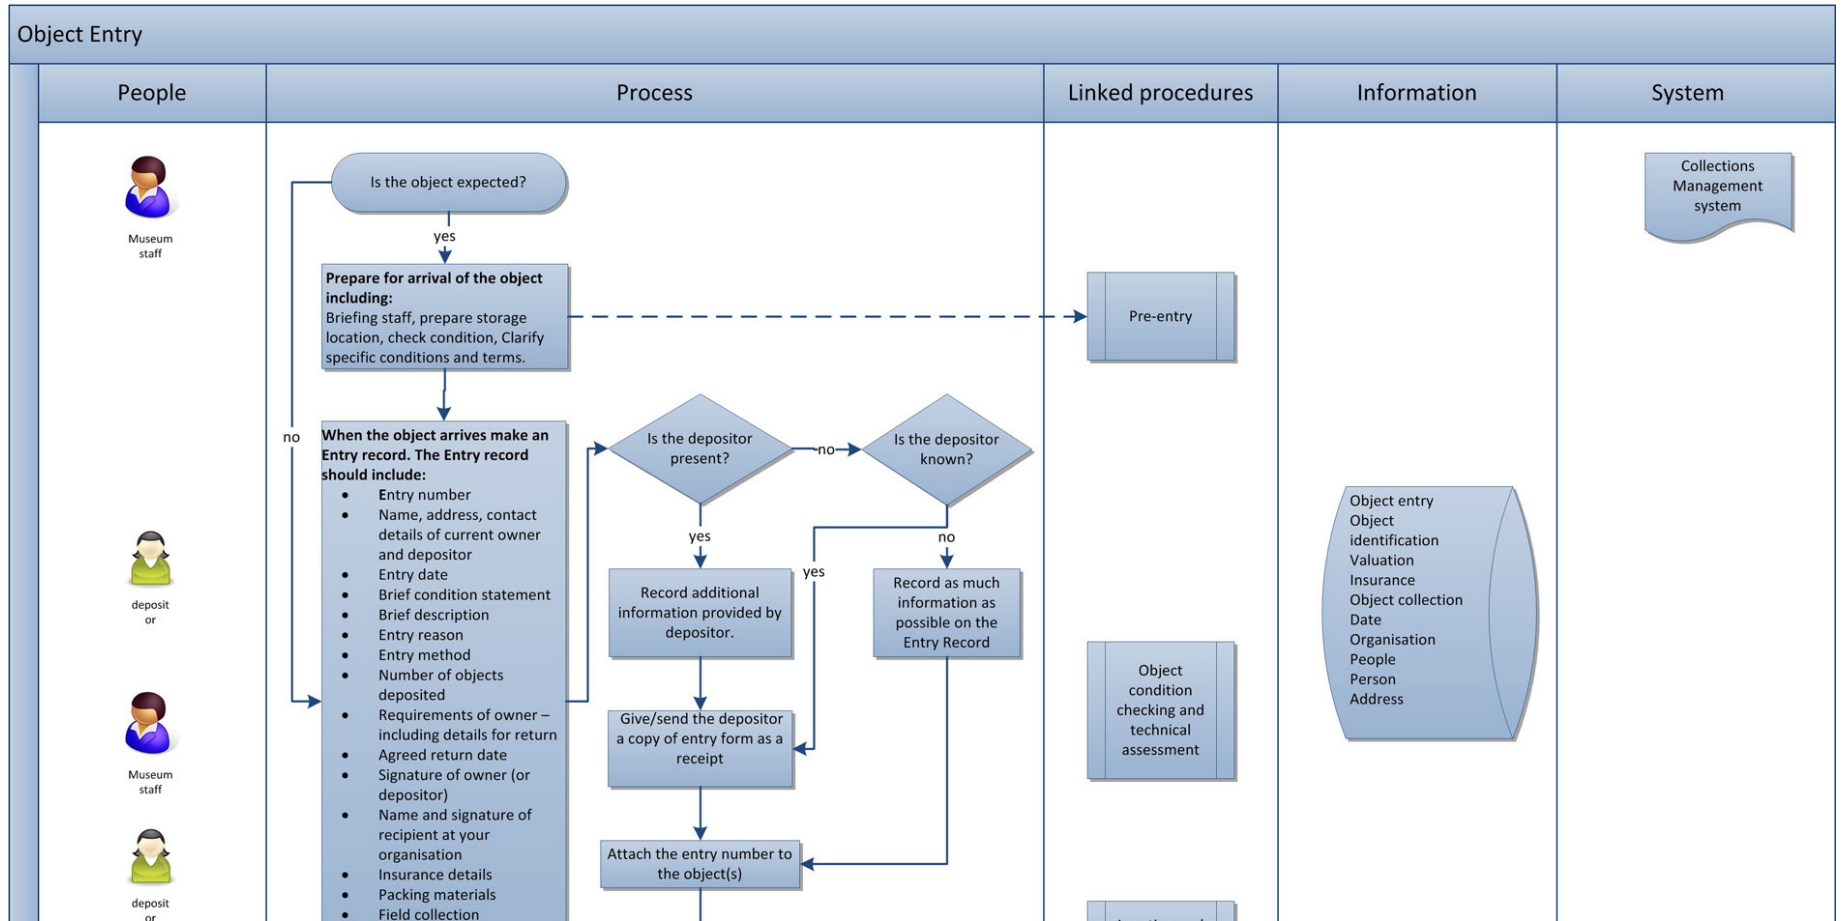

## 2.1.4 SPECTRUM

### UK Museum Collections Management Standard

- Defines procedures for museums to follow, and the attendant data
- Covers 21 procedures: Pre-entry, Object entry, Loans in, Acquisition, Inventory control, Location and movement control, Transport, Cataloguing, Object condition checking and technical assessment, Conservation and collections care, Risk management, Insurance and indemnity management, Valuation control, Audit, Rights management, Use of collections, Object exit, Loans out, Loss and damage, Deaccession and disposal, Retrospective documentation
- Addresses accreditation

## 2.1.5 SPECTRUM EXAMPLE: OBJECT ENTRY

## 2.2 ARCHIVAL CONTENT STANDARDS

- ISAD(G): archival materials
- ISAAR(CPF): agents (corporations, people, families)
- ISDF: functions (eg Secretary of some society)
- ISDIAH: archival holding institutions

Image by D.Pitti, 2015

<u>Standard</u>	<u>Edition</u>	<u>Development Dates</u>	<u>Publication Date</u>
Principles		(1988) 1989-1992	1992
ISAD	1 <sup>st</sup>	1990-1993	1994
ISAAR	1 <sup>st</sup>	1993-1995	1996
ISAD	2 <sup>nd</sup>	1996-2000	1999
ISAAR	2 <sup>nd</sup>	2000-2004	2004
ISDF	1 <sup>st</sup>	2005-2007	2007
ISDIAH	1 <sup>st</sup>	2005-2008	2008

## 2.3 LIBRARY CONTENT STANDARDS

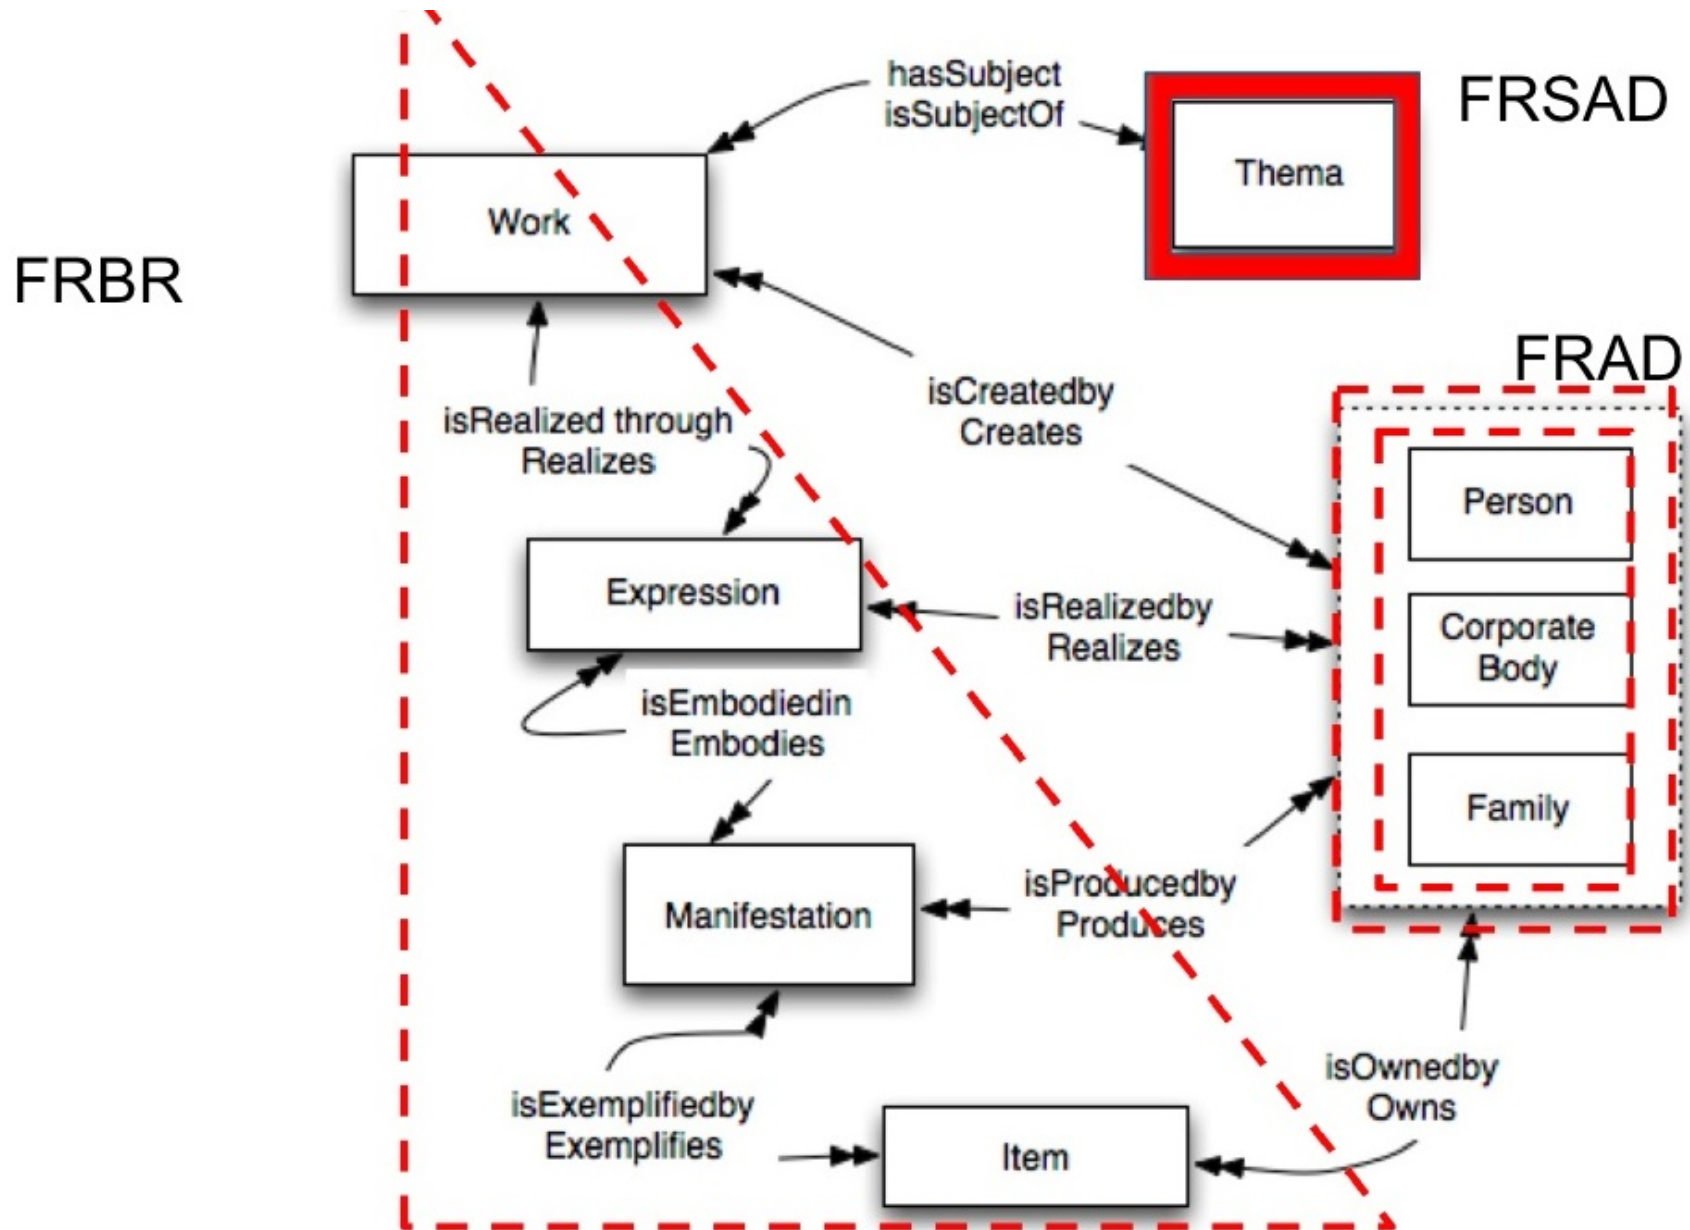

- AACR2 (Anglo-American Cataloging Rules 2)
- International Standard Bibliographic Description (ISBD)
- Resource Description and Access (RDA)

Extremely detailed and comprehensive (see RDA later). But sometimes pay more attention where to put the commas than to:

- Data sharing
- Global availability of resources
- Sharing the cataloging burden

### 2.3.1 FRBR, FRSAD, FRAD

Functional Requirements for Bibliographic Records (FRBR), Subject Authority Data (FRSAD), Authority Data (FRAD) (J.Mitchell, M.Zeng, M.Zumer, 2011)

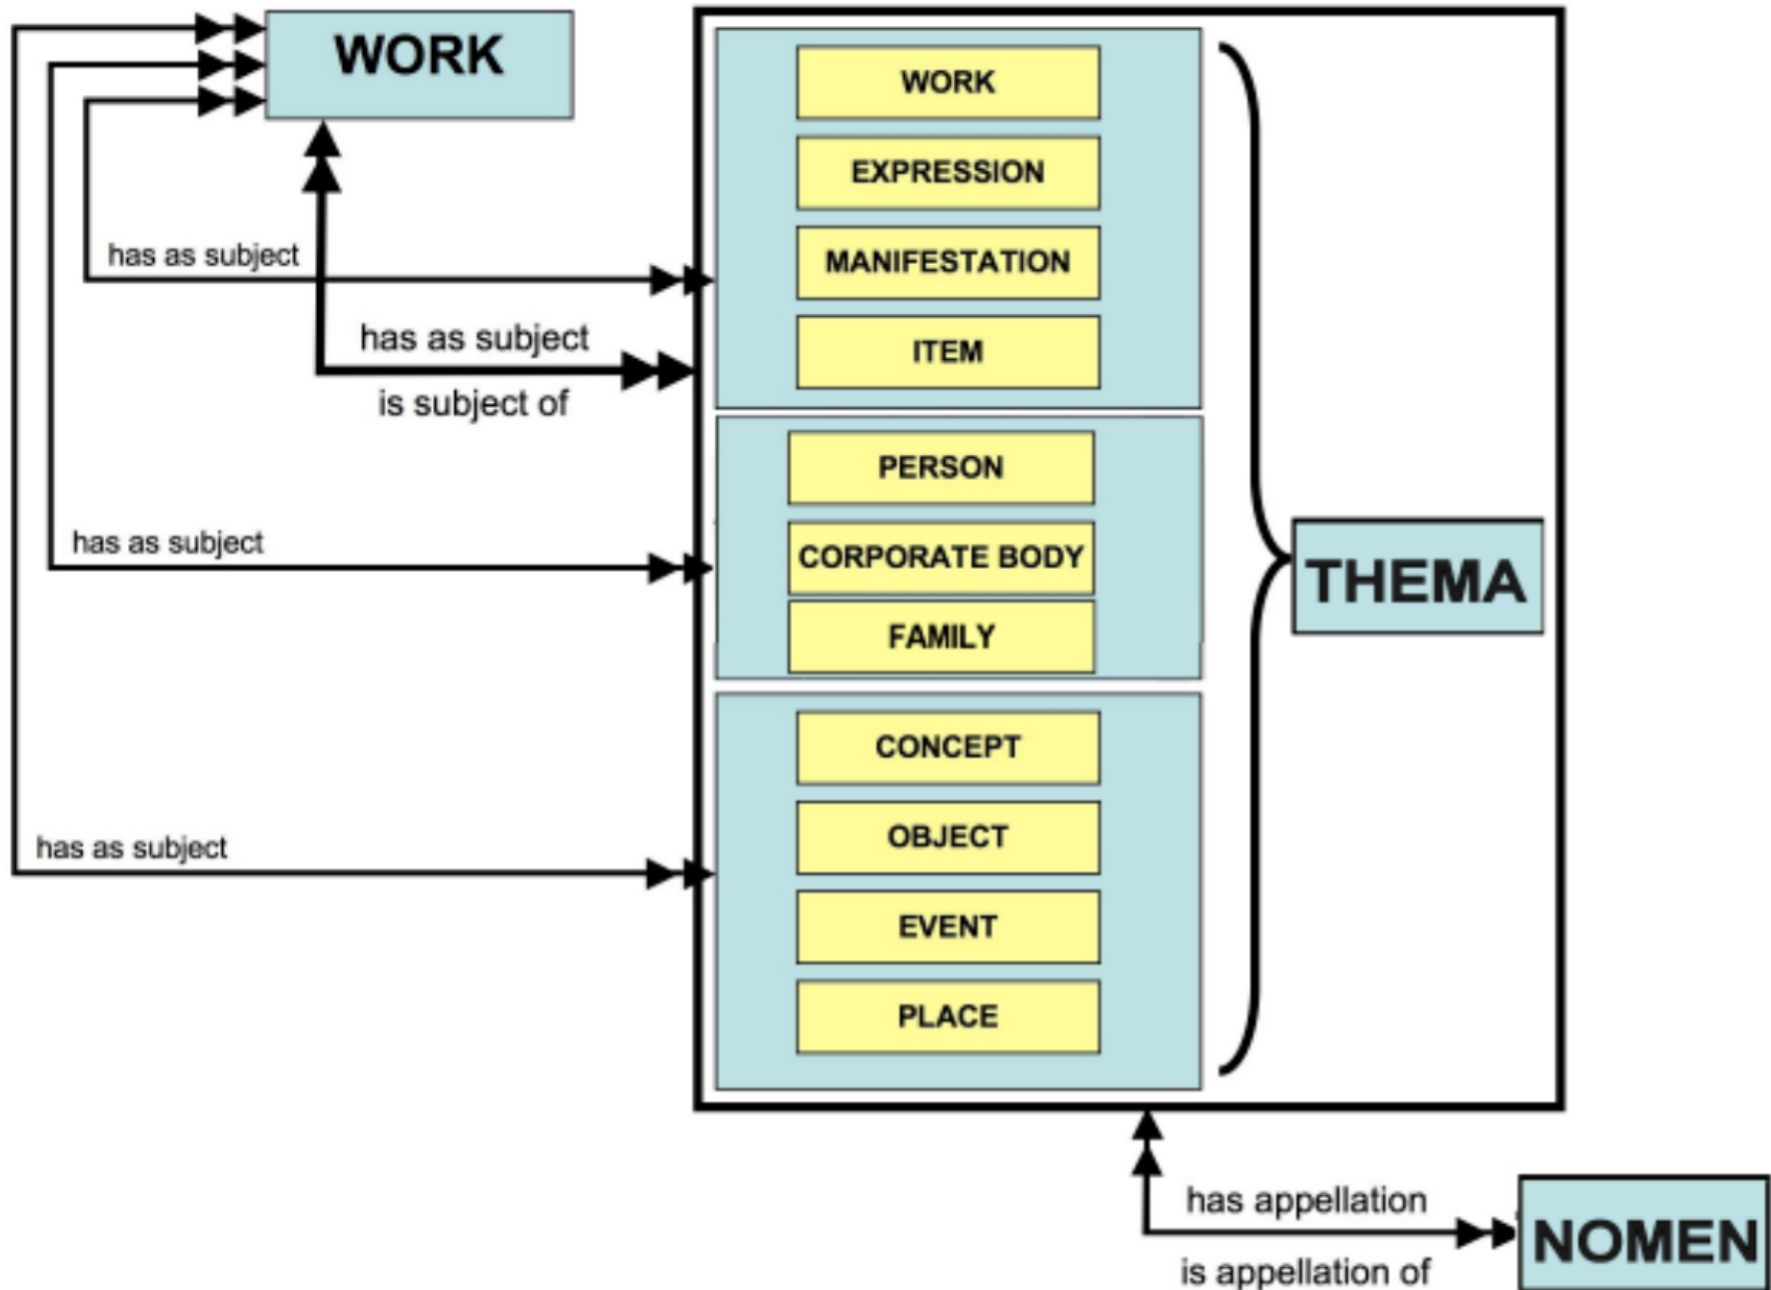

## 2.3.2 FRBR

Starts from user tasks (find, identify, select, obtain, explore). Introduces the important 4-level WEMI model (relates to Uniform Titles):

- Work: original or derived intellectual work (eg Don Quixote)
- Expression: translation or edition (eg Don Quixote translation to English)
- Manifestation: publisher's work (eg with illustrations, foreword by, compilation...). ISBNs are here
- Item: physical copy: libraries track loan/availability; famous copies (eg Lincoln's Bible); manuscripts are singleton items

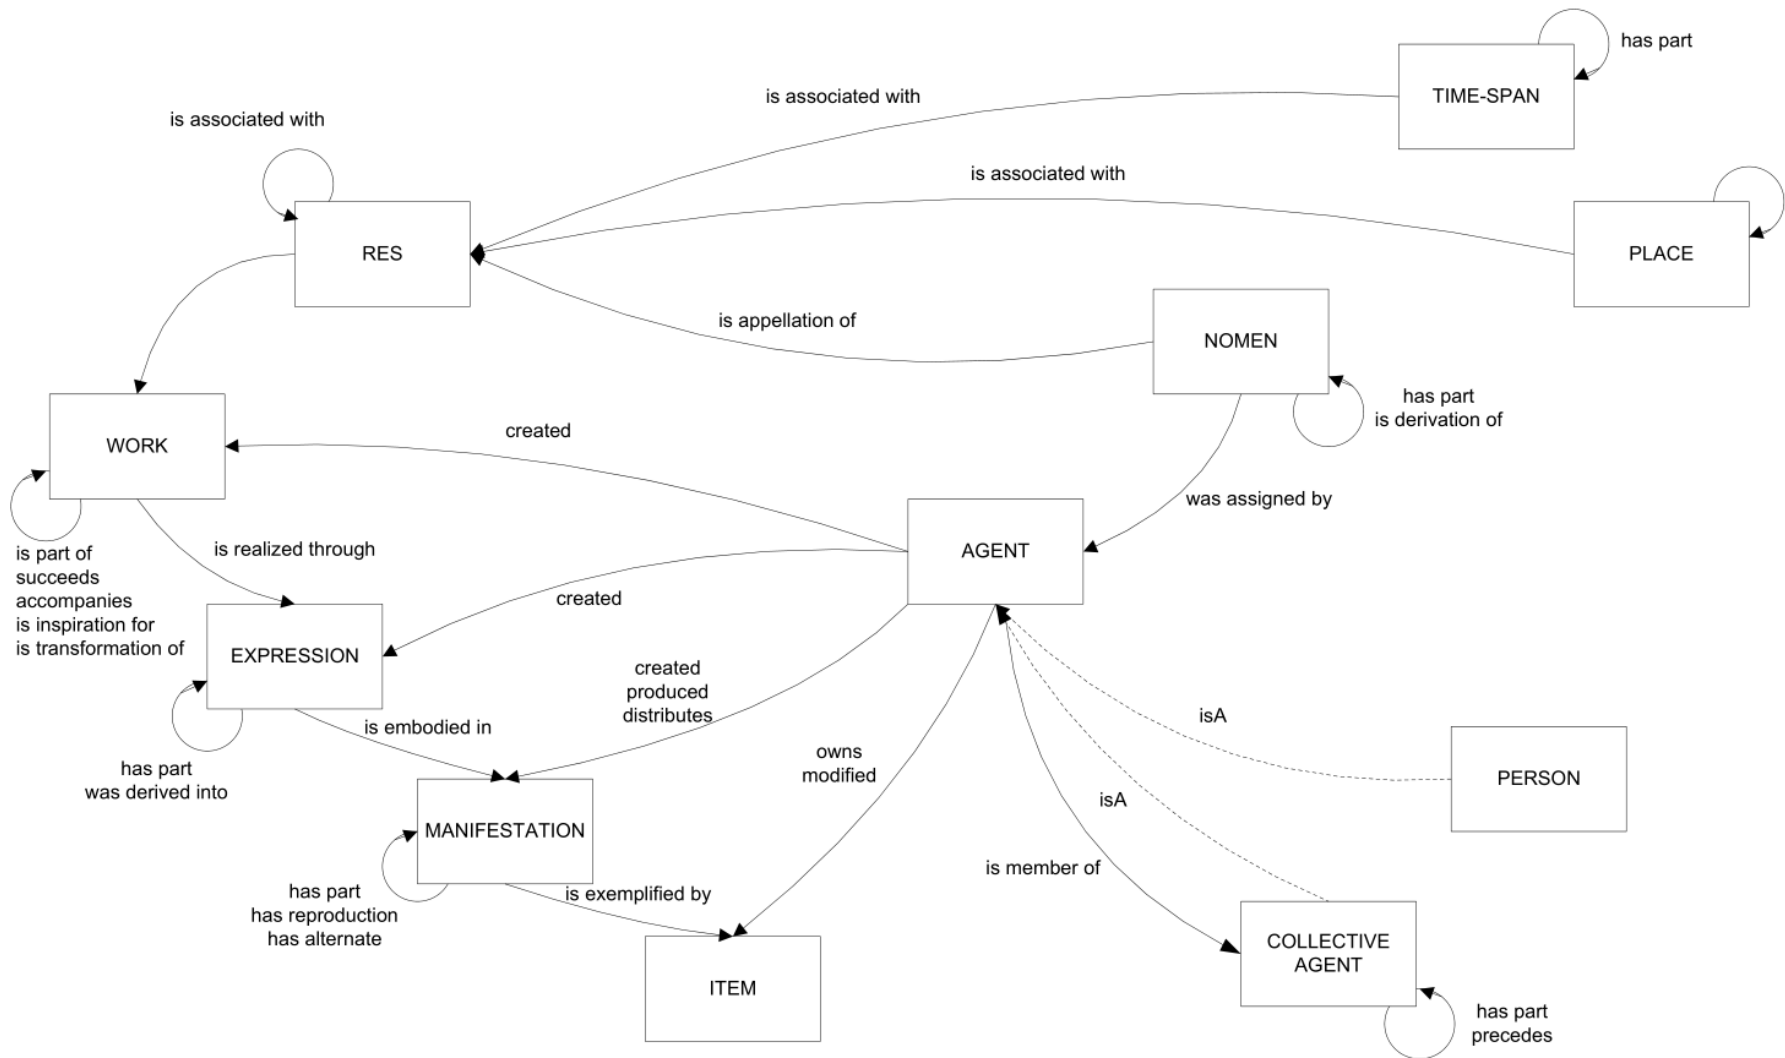

### 2.3.3 FRSAD

Anything can be subject (thema), referred to by various names/titles (nomen)

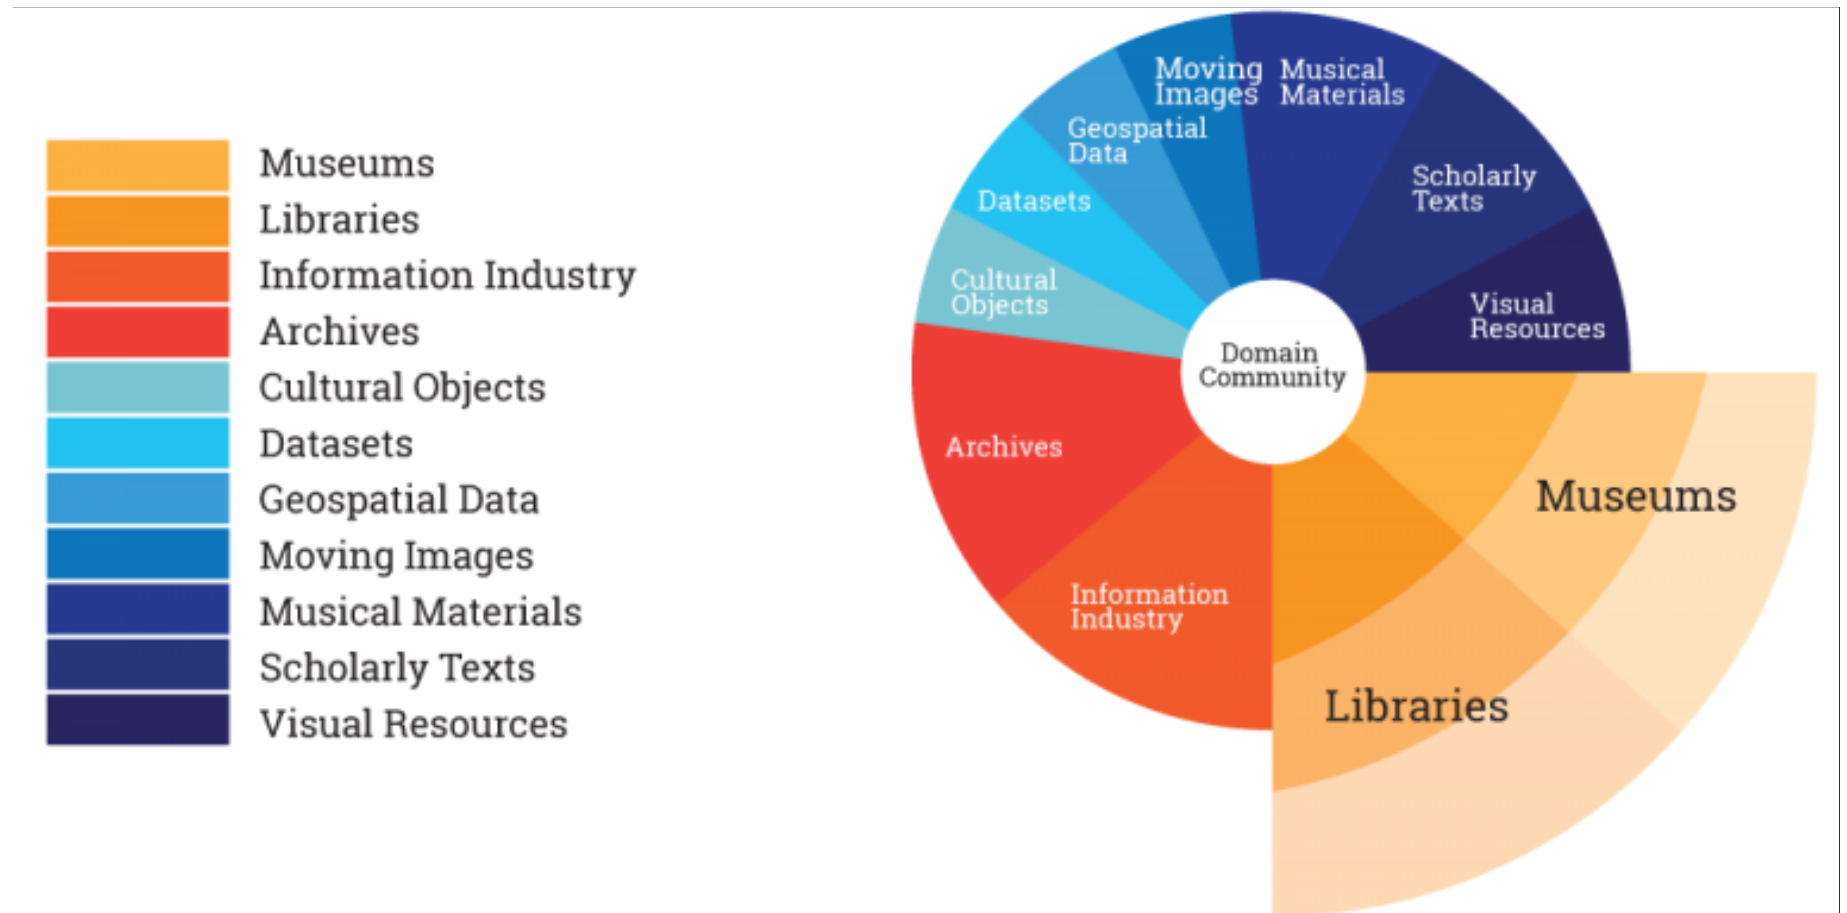

## 2.3.4 FRBR-LRM

FRBR-Library Reference Model (P.Riva, P.Le Bœuf, M.Žumer, Draft for World-Wide Review 2016-02). Merges the previous standards

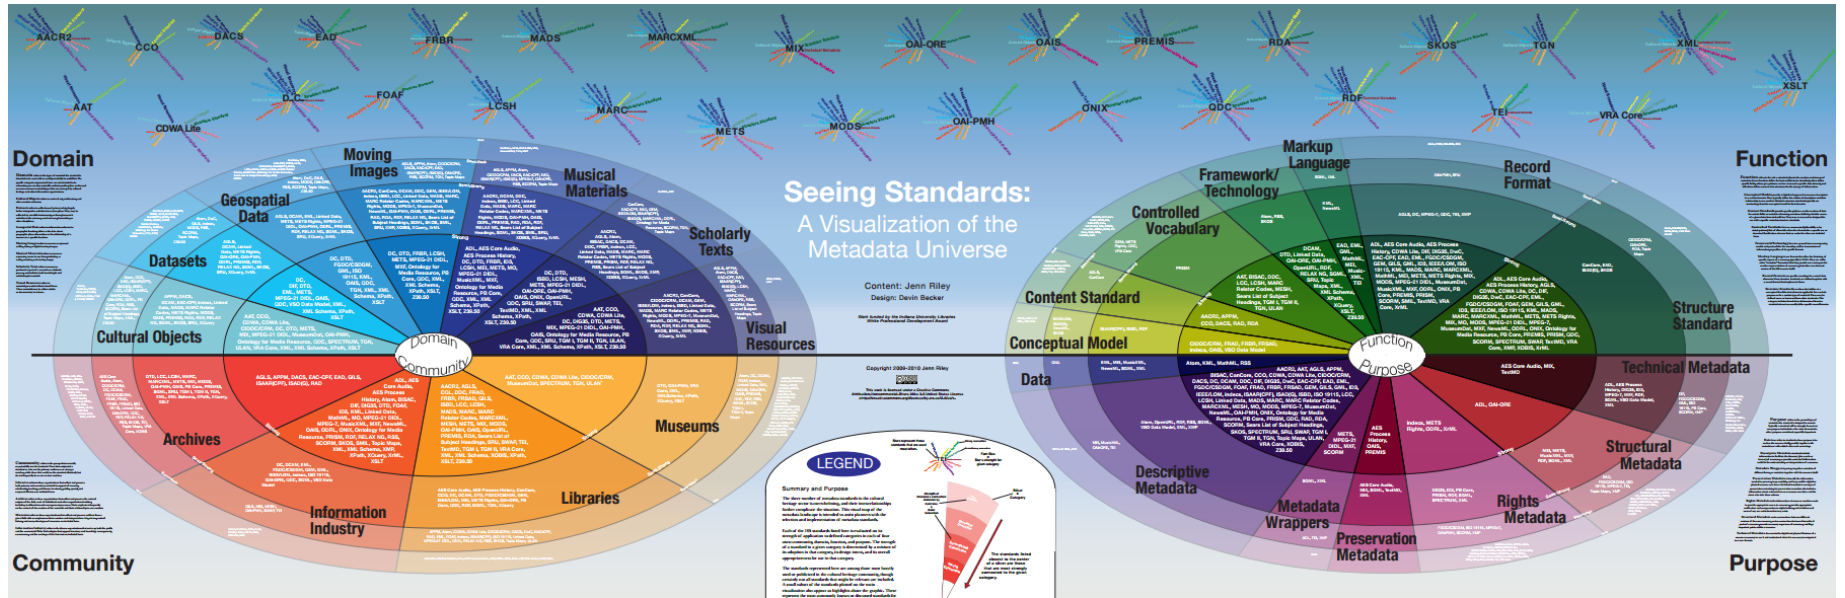

# 3 GLAM METADATA SCHEMAS

How many of the standards listed in [Seeing Standards: A Visualization of the Metadata Universe](#) apply to your work? (by Jenn Riley, Associate Dean for Digital Initiatives at McGill University Library)

# 3.1 SEEING STANDARDS (2)

## 3.2 XML SCHEMAS

Do you deal with XML? I bet you do

- XML Schema (XSD): most widely used, but most unwieldy
- RelaxNG (RNG): new generation schema language
- RNG Compact (RNC): non-XML notation, most readable. Eg EAD3 is mastered in RNC, then RNG and XSD produced
- Schematron: express rules in XPath that can't be captured in XSD/RNG/RNC (eg cross-field validation)

Tools:

- <https://github.com/EHRI/jing-trang/tree/EHRI-176>: patch the jing RNG validator to emit errors like Schematron (SVRL with XPath error location)
- <https://github.com/VladimirAlexiev/rnc>: RNC tools and CH schemas in RNC. Emacs with code highlighting and syntax checking (flycheck)

```
Vocabulary =
  element Vocabulary {
    JUNK..... element Subject {(
      element Ancestors {
        (element Preferred_Ancessor_Branch {
          element Ancestor {
            element Immediate {ParentType},
            element Other {ParentType}*})
        & element Non-Preferred_Ancessor_Branches {
          element Non-Preferred_Ancessor_Branch {
            element Ancestor {
              element Immediate {ParentType},
              element Other {ParentType}*}}+)?).
```

## 3.3 MUSEUM METADATA: CDWA

Categories for the Description of Works of Art (CDWA): realization of CCO, 532 "categories" (data elements).

**1. Object/Work Type**

**2. Title**

**3. Display Creator**

**4. Indexing Creator**

**5. Display Measurements**

**6. Indexing Measurements**

**7. Display Materials/Techniques**

**8. Indexing Materials/Technique**

**9. Display State/Edition**

**10. Style**

**11. Culture**

**12. Display Creation Date**

**13. Indexing Dates**

**14. Location / Repository**

**15. Indexing Subject**

**16. Classification**

**17. Description / Descriptive Note**

**18. Inscriptions**

**19. Related Works**

**20. Rights for Work**

**21. Record**

**22. Resources**

## 3.3.1 CDWA LITE

XML schema implementing part of CDWA. Moderate complexity, about 300 elements.  
Display vs Indexing (structured) elements, eg for Dimension.

```
AdministrativeMetadata = element administrativeMetadata {rightsWork*, recordWrap?, resourceWrap?,
descriptiveMetadata = element descriptiveMetadata {
  objectWorkTypeWrap,
  titleWrap,
  displayCreator,
  indexingCreatorWrap,
  displayMeasurements?,
  indexingMeasurementsWrap?,
  displayMaterialsTech,
  indexingMaterialsTechWrap?,
  displayStateEditionWrap?,
  styleWrap?,
  cultureWrap?,
  displayCreationDate,
  indexingDatesWrap,
  locationWrap,
  indexingSubjectWrap?,
  classWrap?,
  descriptiveNoteWrap?,
  inscriptionsWrap?,
  relatedWorksWrap?}
resourceWrap = element resourceWrap {resourceSet*}
attributionQualifierCreator = element attributionQualifierCreator {xsd:string}
classification = element classification {xsd:string, attr_termsource, attr_termsourceID}
classWrap = element classWrap {classification*}
culture = element culture {xsd:string, attr_termsource, attr_termsourceID}
cultureWrap = element cultureWrap {culture*}
dateQualifier = element dateQualifier {xsd:string}
descriptiveNote = element descriptiveNote {xsd:string}
descriptiveNoteWrap = element descriptiveNoteWrap {descriptiveNoteSet*}
descriptiveNoteSet = element descriptiveNoteSet {descriptiveNote?, sourceDescriptiveNote*}
displayCreationDate = element displayCreationDate {xsd:string}
displayCreator = element displayCreator {xsd:string}
displayEdition = element displayEdition {xsd:string}
displayMaterialsTech = element displayMaterialsTech {xsd:string}
displayMeasurements = element displayMeasurements {xsd:string}
displayState = element displayState {xsd:string}
displayStateEditionWrap = element displayStateEditionWrap {displayState*, displayEdition*}
earliestDate = element earliestDate {xsd:string, attr_termsource}
extentMeasurements = element extentMeasurements {xsd:string}
resourceID = element resourceID {xsd:string, attr_type}
resourceRelType = element resourceRelType {xsd:string, attr_type}
resourceType = element resourceType {xsd:string, attr_termsource, attr_termsourceID}
rightsResource = element rightsResource {xsd:string, attr_type}
resourceViewDescription = element resourceViewDescription {xsd:string, attr_type}
resourceViewSubjectTerm = element resourceViewSubjectTerm {xsd:string, attr_termsource, attr_type}
resourceViewType = element resourceViewType {xsd:string, attr_termsource, attr_type}
resourceViewDate = element resourceViewDate {
  xsd:string,
  attr_type,
  attribute earliestdate {xsd:string}?,
  attribute latestdate {xsd:string}?}
resourceSource = element resourceSource {
  xsd:string,
  attr_type,
  attribute earliestdate {xsd:string}?,
  attribute latestdate {xsd:string}?}
linkRelatedResource = element linkRelatedResource {relatedResourceRelType?, labelRelatedResource?,
relatedResourceRelType = element relatedResourceRelType {xsd:string}
labelRelatedResource = element labelRelatedResource {xsd:string}
resourceMetadataLoc = element resourceMetadataLoc {xsd:string, attr_type}
indexingCreatorSet = element indexingCreatorSet {
  nameCreatorSet+,
  nationalityCreator*,
  vitalDatesCreator*}
```

## 3.3.2 CONA SCHEMA

Cultural Objects Name Authority (CONA): Getty museum data aggregation. Moderate complexity, about 280 elements:

```

element Subject {
  (element Ancestors {
    (element Preferred_Ancestor_Branch {
      element Ancestor {
        element Immediate {ParentType},
        element Other {ParentType}*)
      & element Non-Preferred_Ancestor_Branches {
        element Non-Preferred_Ancestor_Branch {
          element Ancestor {
            element Immediate {ParentType},
            element Other {ParentType}*)+)?},
        [a:defaultValue = "3000000000"]
        attribute Broad_Parent_ID {VP_Subject_ID}?
      & element Associative_Relationships {
        element Associative_Relationship {
          element Description {xsd:string}?
          & element AR_Date {
            element Display_Date {xsd:string}
            & element Start_Date {Geog_Date}
            & element End_Date {Geog_Date}}?
          & element Historic_Flag {associative_rels_hist}?
          & element Relationship_Type {ar_code}
          & element Related_Subject_ID {
            element VP_Subject_ID {VP_Subject_ID}
            | element Contrib_Subject_ID {xsd:string}}+
        & element Descriptive_Notes {
          element Descriptive_Note {
            element Note_Text {xsd:string}
            & element Note_Language {language_code}
            & element Note_Sources {
              element Note_Source {
                element Source {SourceType}
                & element Page {xsd:string}?+}})*?
          & element Record_Type {sub_record_type}?
          & element Sort_Order {xsd:int}
          & element Special_Project {xsd:string}?
          & element Subject_Contributor {
            element Contributor_id {contrib_code}
            & element Contrib_subject_id {xsd:string}?
            & element Contrib_Note {xsd:string}?
            & element Editor_name {xsd:string}
            & element Editor_email {xsd:string}}
          & element Subject_Sources {
            element Subject_Source {
              element Source {SourceType}
              & element Page {xsd:string}?+}?
          & element Terms {
            element Preferred_Term {TermType},
            element Non-Preferred_Term {TermType}*)
          & element Work_Types {
            & element Work_Types {
              element Preferred_Work_Type {Work_TypeType},
              element Non-Preferred_Work_Type {Work_TypeType}*+
            & element Other_Displays {OtherDisplaysType}

### 3.3.4 LIDO

Lightweight Information Describing Objects (LIDO). Evolved from CDWA, museumdat, with inspiration from CIDOC CRM. (Images by R.Stein and A.Vitzthum, ATHENA workshop, 2010)

## Descriptive and administrative elements of a LIDO record

- *Object Classifications* –

Object / Work Type (*mandatory*)

Classification

- *Object Identifications* –

Title / Name (*mandatory*)

Inscriptions

Repository / Location

State / Edition

Object Description

Measurements

- *Events* –

Event Set

- *Relations* –

Subject Set

Related Works

- *Administrative Metadata* –

Rights

Record (*mandatory*)

Resource

### 3.3.5 LIDO SCHEMA

- Complex schema, eg when referring to a related object, you can provide almost as much detail as for the main object. Could leverage opportunities for linking more.
- Display vs Indexing (structured) elements: inherited from CDWA

## Object Identification

## 3.4 ARCHIVE METADATA

- EAD: Encoded Archival Description. Describes archival materials (documentary units)
- EAC/CPF: Encoded Archival Context: Corporations, Persons, Families
- EAG: Encoded Archival Guide. Describes institutions

### 3.4.1 ARCHIVE METADATA PROBLEMS

Pay a lot of attention to presentation, not enough to linking (difficult to "semanticize").  
Emphasis on documents, not historic agents and events

- EAG: So-called "controlled access points" are text, and typically not controlled at all
- EAC: Many institutions don't consider EAC very valuable, and instead put person info in EAD's **bioghist** element (example below from EADiva)
- EAC: Related persons are names ("strings"), not links ("things")
- EAC: Events include lots of info but only Date is separate field (person names could be tagged but often are not)
- EAC: Family tree modeled as Outline, that's also used for other purposes (just presentation)

```
<bioghist>
  <head>Chronological Events</head>
  <chronlist>
    <chronitem>
      <date normal="19781028">October 28, 1978</date>
      <event>
        <persname normal="Wosname, Samuel">Sam Wosname</persname> succeeds
        <persname normal="Othername, John">John Othername</persname> as department head.
      </event>
    </chronitem>
    <chronitem>
      <date normal="19790315">March 15, 1979</date>
      <event>Departmental reorganization.</event>
    </chronitem>
  </chronlist>
</bioghist>
```

## 3.5 LIBRARY METADATA: MARC

MARC is 50 years old, unreadable, and doesn't accommodate new FRBR principles.  
MARC-XML is not much better

### 3.5.1 MARC MUST DIE

A whole emotional subculture, based on a slogan by Roy Fielding, 2002.

- [marc-must-die.info](http://marc-must-die.info): "MARC is dead" (is it really?)
- FutureLib: in-depth discussion wiki
- Facebook group

Presentation by Sally Chambers, ELAG 2011

## MARC must die?

European  
Library  
Automation  
Group

Killing MARC is down  
to you.....

# 4 GLAM ONTOLOGIES

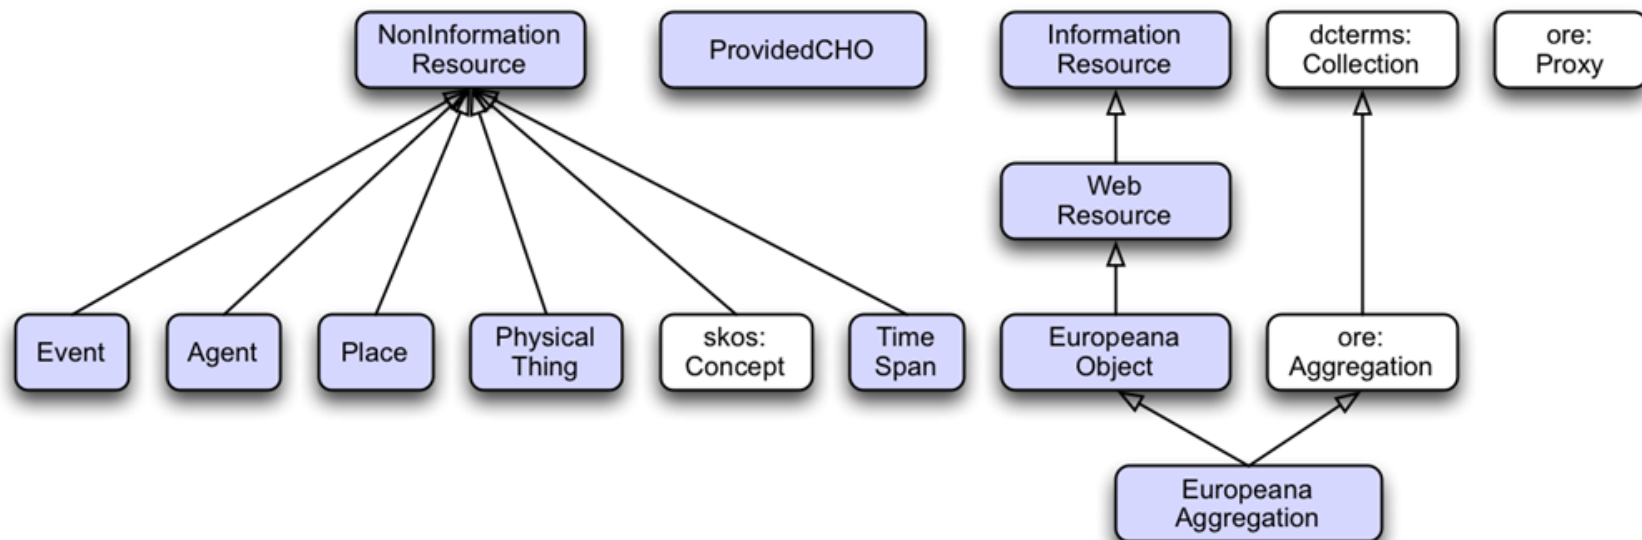

Why do they call conversion to RDF "lifting" and back to some other format "lowering"?

- RDF is a simple abstracted data model
- Doesn't have nesting biases like XML: whether a sub-element is nested or referenced by ID. Has less syntactic idiosyncrasies
- (RDF/XML is awful, but there is Turtle for readability, or JSONLD for programmer convenience)
- The model is self-describing in a distributed way: if a class/property is looked up, should return description and info

## 4.1 EUROPEANA DATA MODEL

Model used by the Europeana aggregator (53M objects), and adopted by Digital Public Library of America (DPLA) Based on:

- OAI ORE (Open Archives Initiative Object Reuse & Exchange): organizing object metadata and digital representations (WebResources)
- Dublin Core: descriptive metadata
- SKOS (Simple Knowledge Organization System): conceptual objects (concepts, agents, etc)
- CIDOC-CRM inspired: events, some relations between objects

## 4.1.1 EDM SEMANTIC GRAPH

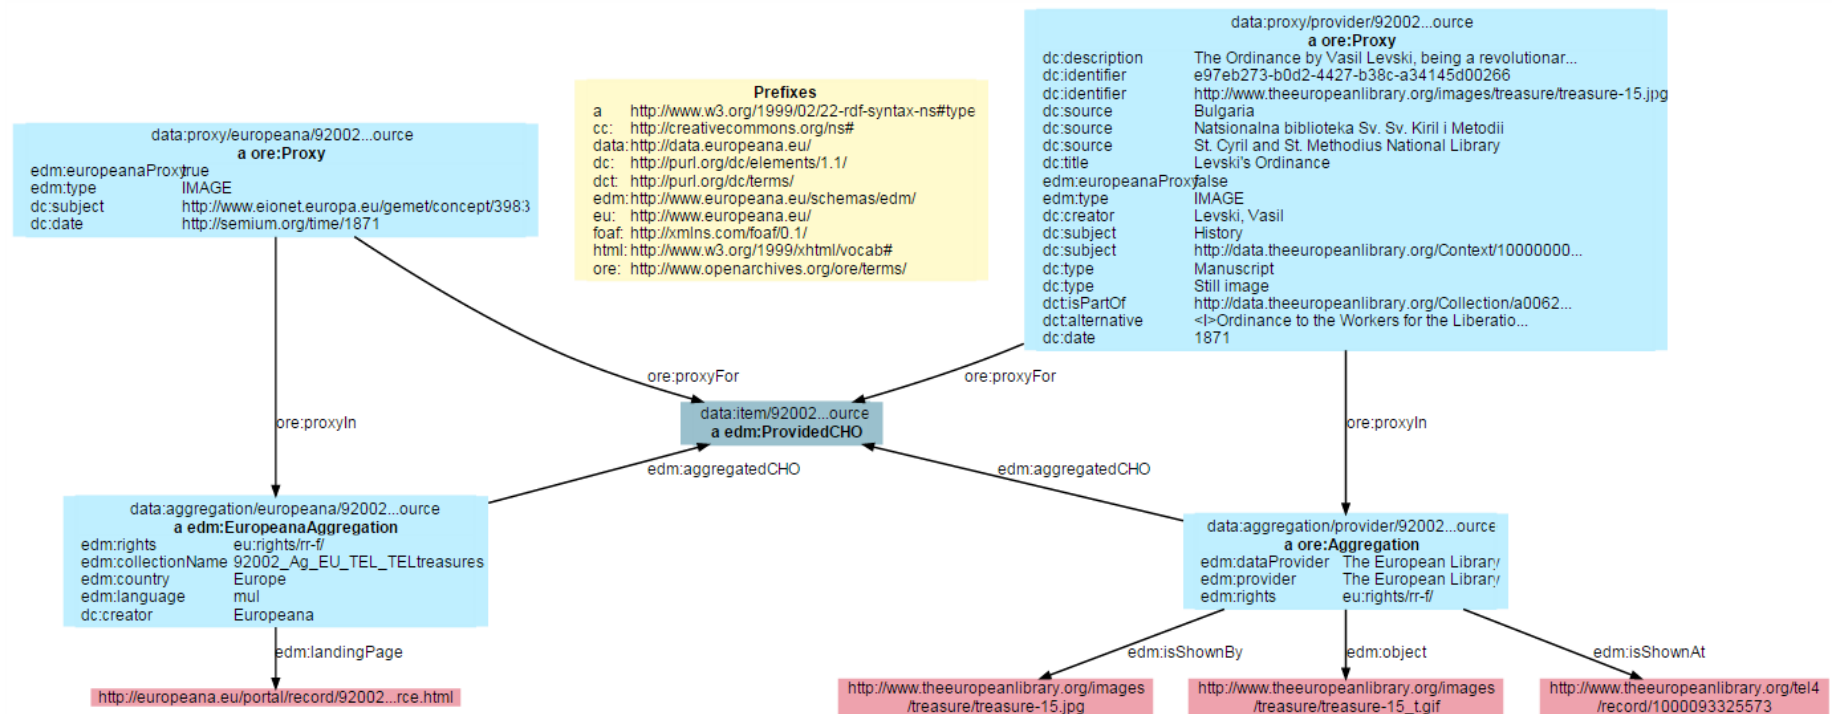

### Levski's Ordinance

Download as ▾

Source: [http://data.europeana.eu/item/92002/BibliographicResource\\_1000093325573\\_source](http://data.europeana.eu/item/92002/BibliographicResource_1000093325573_source)

Description: The Ordinance by Vasil Levski, being a revolutionary code in its essence, is a great achievement of the democratic thought that constitutes not only the ideology of the Bulgarian liberation movement but the era of the liberating revolutions as a whole. Though it bears specific Bulgarian characteristics and circumstances, this document is unique by itself in the history of the liberating struggles in the XIX c. with its logistic and systematic construction, the consistent democracy not opposed to the opportunity for the people's revolutionary will to be imposed with good organization and violence, even. In the Ordinance Levski draws the outlines of the future free democratic society, of the "sacred and fair republic", of the "people's government" based on the Renaissance and the enlightened political thought. On the first page of the document the political philosophy of the author is stated determining the motives and aims of the new revolutionary organization with the main slogan been that tyranny and lack of humanity should be replaced by democratic republic. The basic principles governing the future state will be: the equality of all citizens; the equality of all nationalities; civil and political rights; the rule of law; independence of all authorities.

## 4.1.2 EDM ISSUES/CONSIDERATIONS

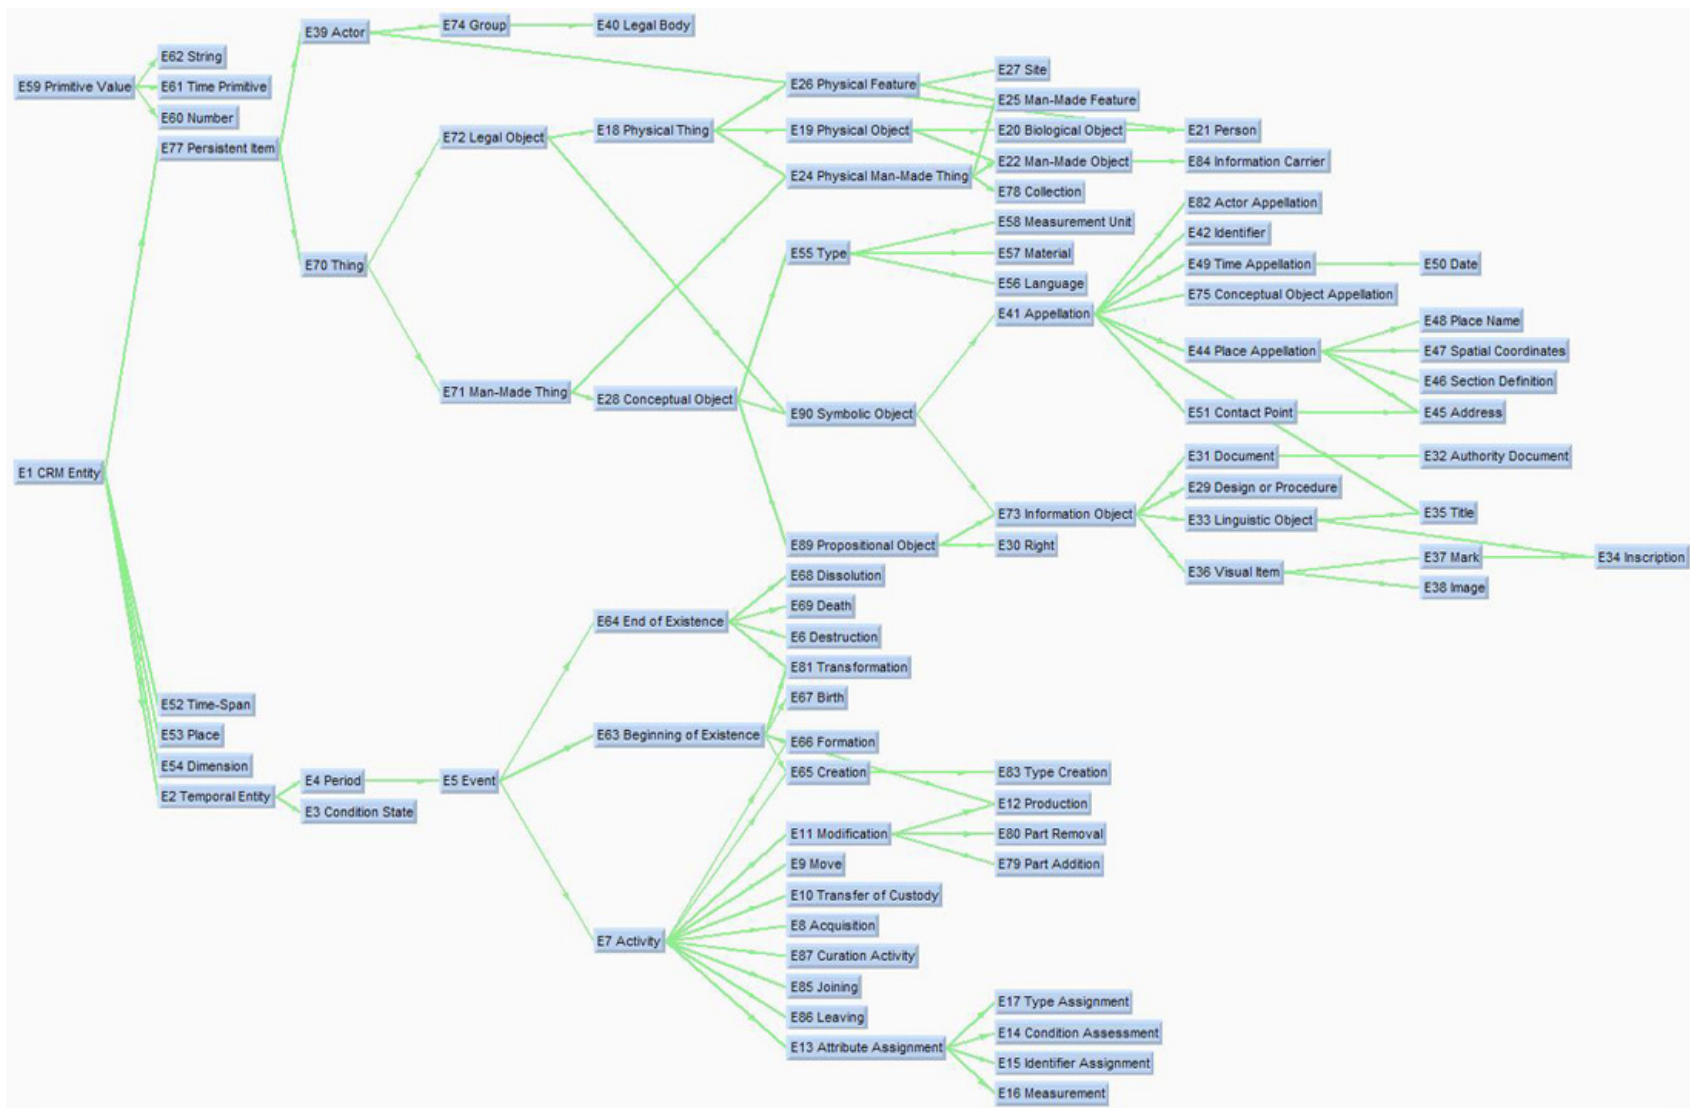

- Criticized that it's not expressive enough. Eg can't capture the specific contribution of an artist to artwork
- Complication: splits info about an object:
  - EDM External (from provider): edm:ProvidedCHO and ore:Aggregation
  - EDM Internal (at Europeana): edm:ProvidedCHO and 2 <ore:Aggregation, ore:Proxy> pairs
- Many providers use the minimal features and make mistakes; Europeana didn't do a lot of validation
  - Old objects retro-converted from ESE are poor (only text), though some enrichments added by Europeana
  - [Europeana Data Quality Committee](#) formed, to push this strategic point (2015-2020)

Evolving specification (since 2009)

- Currently considering actual implementation of Events
- Extensions for manuscripts, music, fashion, etc

# 4.2 CIDOC CRM

**CIDOC CRM:** comprehensive reference model used for history, historic events, archaeology, museum data, etc by CIDOC (ICOM documentation committee). Standardized as ISO 21127:2014, still evolving. About 85 classes, fundamental branches: Persistent (endurant) vs Temporal (perdurant), Physical vs Conceptual

## 4.2.1 CIDOC CRM PROPERTIES

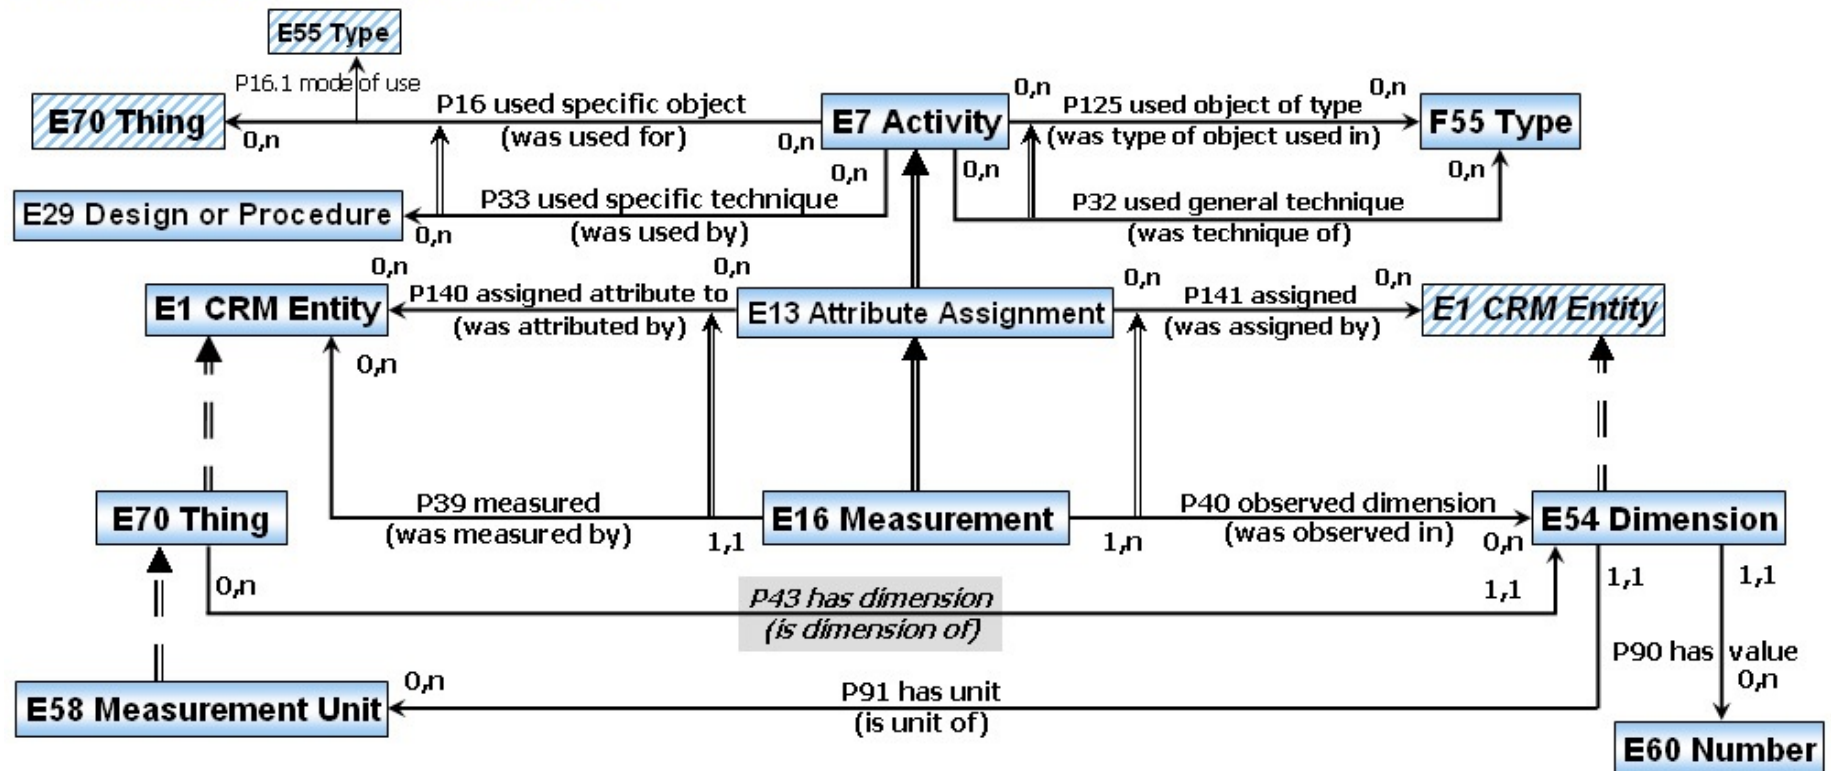

Classes represent abstract things (eg `crm:E24_Physical_Man-Made_Thing`), specific things (eg Paintings, Coins) are accommodated with `crm:P2_has_type`. 135 props (plus their inverses); prop hierarchy (see "- - -" at bottom):

<b>Id</b>	<b>Property Name</b>	<b>Entity - Domain</b>	<b>Entity - Range</b>
<a href="#">P1</a>	is identified by (identifies)	<a href="#">E1</a> CRM Entity	<a href="#">E41</a> Appellation
<a href="#">P48</a>	- has preferred identifier (is preferred identifier of)	<a href="#">E1</a> CRM Entity	<a href="#">E42</a> Identifier
<a href="#">P78</a>	- is identified by (identifies)	<a href="#">E52</a> Time-Span	<a href="#">E49</a> Time Appellation
<a href="#">P87</a>	- is identified by (identifies)	<a href="#">E53</a> Place	<a href="#">E44</a> Place Appellation
<a href="#">P102</a>	- has title (is title of)	<a href="#">E71</a> Man-Made Thing	<a href="#">E35</a> Title
<a href="#">P131</a>	- is identified by (identifies)	<a href="#">E39</a> Actor	<a href="#">E82</a> Actor Appellation
<a href="#">P2</a>	has type (is type of)	<a href="#">E1</a> CRM Entity	<a href="#">E55</a> Type
<a href="#">P137</a>	- exemplifies (is exemplified by)	<a href="#">E1</a> CRM Entity	<a href="#">E55</a> Type
<a href="#">P3</a>	has note	<a href="#">E1</a> CRM Entity	<a href="#">E62</a> String
<a href="#">P79</a>	- beginning is qualified by	<a href="#">E52</a> Time-Span	<a href="#">E62</a> String
<a href="#">P80</a>	- end is qualified by	<a href="#">E52</a> Time-Span	<a href="#">E62</a> String
<a href="#">P4</a>	has time-span (is time-span of)	<a href="#">E2</a> Temporal Entity	<a href="#">E52</a> Time-Span
<a href="#">P5</a>	consists of (forms part of)	<a href="#">E3</a> Condition State	<a href="#">E3</a> Condition State
<a href="#">P7</a>	took place at (witnessed)	<a href="#">E4</a> Period	<a href="#">E53</a> Place
<a href="#">P26</a>	- moved to (was destination of)	<a href="#">E9</a> Move	<a href="#">E53</a> Place
<a href="#">P27</a>	- moved from (was origin of)	<a href="#">E9</a> Move	<a href="#">E53</a> Place
<a href="#">P8</a>	took place on or within (witnessed)	<a href="#">E4</a> Period	<a href="#">E19</a> Physical Object
<a href="#">P9</a>	consists of (forms part of)	<a href="#">E4</a> Period	<a href="#">E4</a> Period
<a href="#">P10</a>	falls within (contains)	<a href="#">E4</a> Period	<a href="#">E4</a> Period
<a href="#">P148</a>	has component (is component of)	<a href="#">E89</a> Propositional Object	<a href="#">E89</a> Propositional Object
<a href="#">P12</a>	occurred in the presence of (was present at)	<a href="#">E5</a> Event	<a href="#">E77</a> Persistent Item
<a href="#">P11</a>	- had participant (participated in)	<a href="#">E5</a> Event	<a href="#">E39</a> Actor
<a href="#">P14</a>	-- carried out by (performed)	<a href="#">E7</a> Activity	<a href="#">E39</a> Actor
<a href="#">P22</a>	--- transferred title to (acquired title through)	<a href="#">E8</a> Acquisition	<a href="#">E39</a> Actor
<a href="#">P23</a>	--- transferred title from (surrendered title through)	<a href="#">E8</a> Acquisition	<a href="#">E39</a> Actor

## 4.2.2 CIDOC GRAPHICAL EXAMPLES

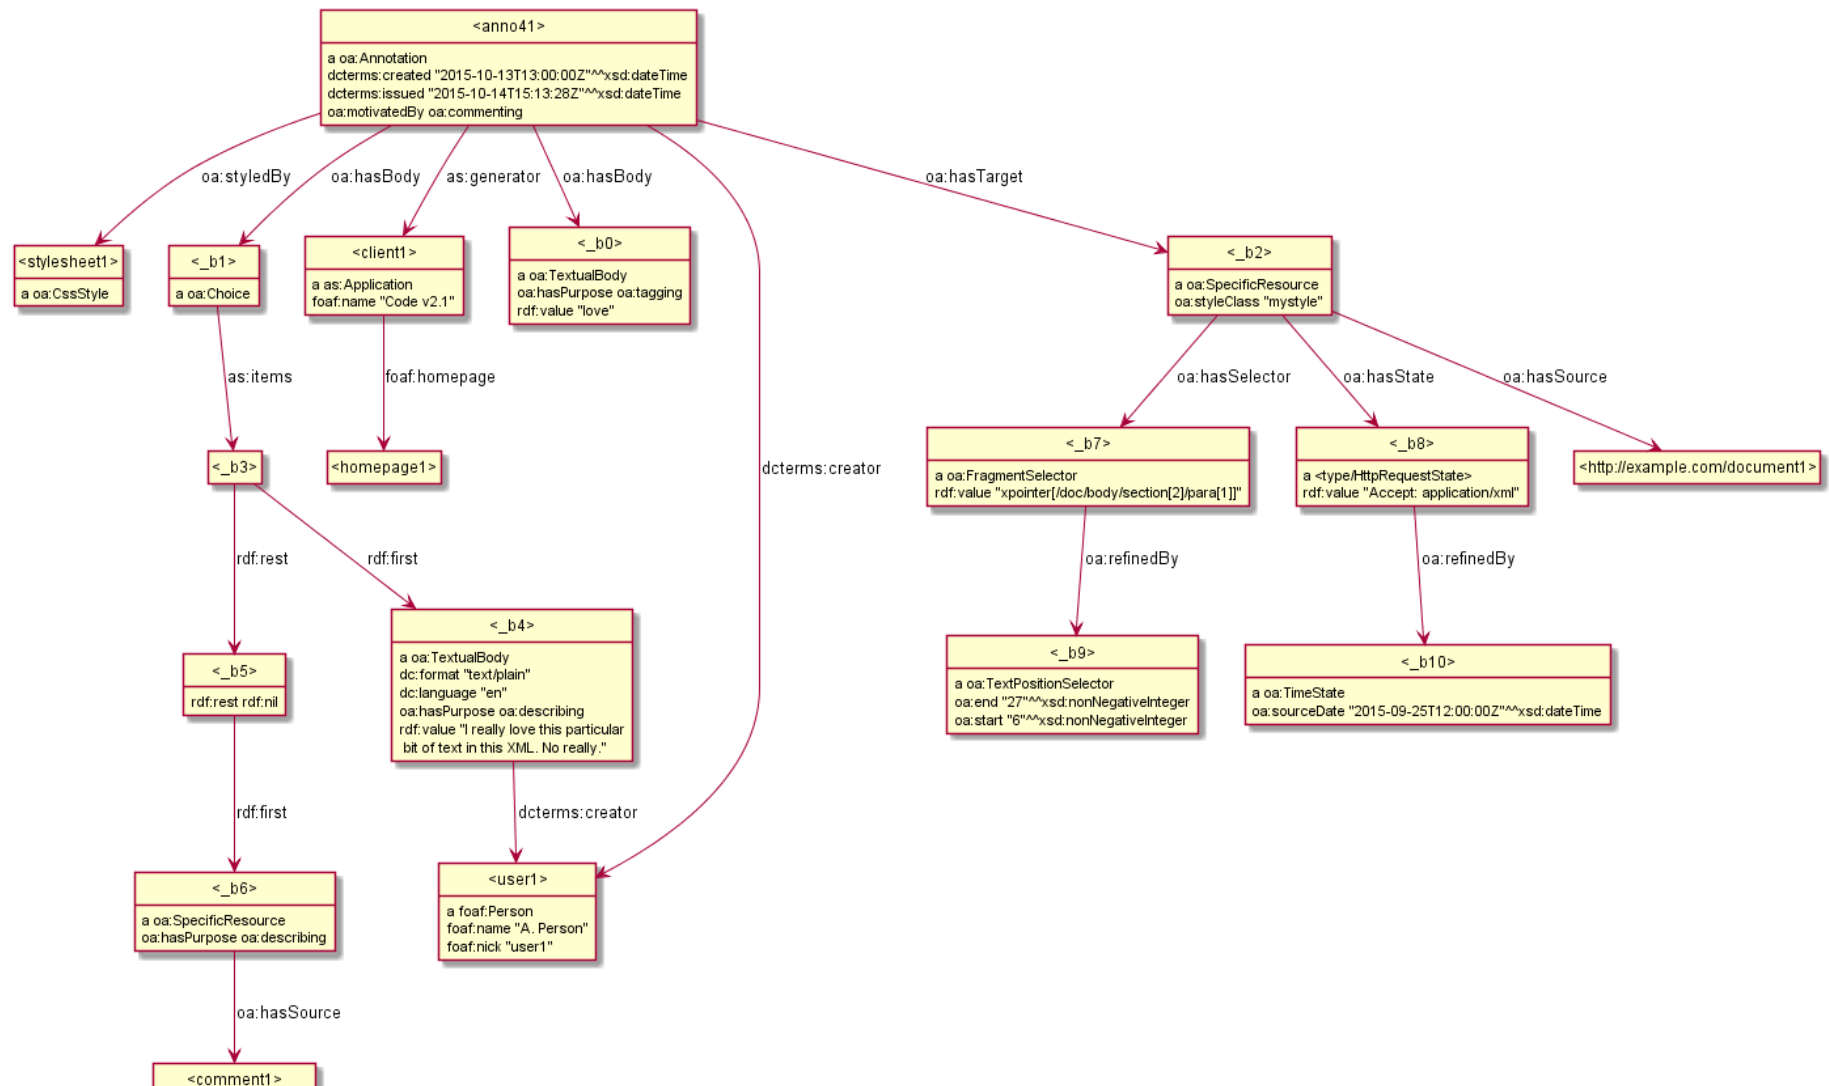

- [Video Tutorial](#) (or [HTML version](#) including Kindle)
- [Graphical Representation](#) (or [continuous HTML version](#) including Kindle): essential to understand how to apply CRM in various situations
- Typical modeling construct **short-cut** (crm:P43\_has\_dimension) vs **long-path** (eg crm:P39i\_was\_measured\_by/crm:P40\_observed\_dimension), which allows more details

### MEASUREMENT INFORMATION

# 4.3 WEB ANNOTATION (OPEN ANNOTATION, OA)

W3C TR: mark, annotate, relate any web resources, eg: Webpage and bookmark, Image and region over it, Document and translation, Paragraph and commentary. Diagram of Complete Example from spec (using my rdfpuml)

## 4.4 INTERNATIONAL IMAGE INTEROP FRAMEWORK (IIIF)

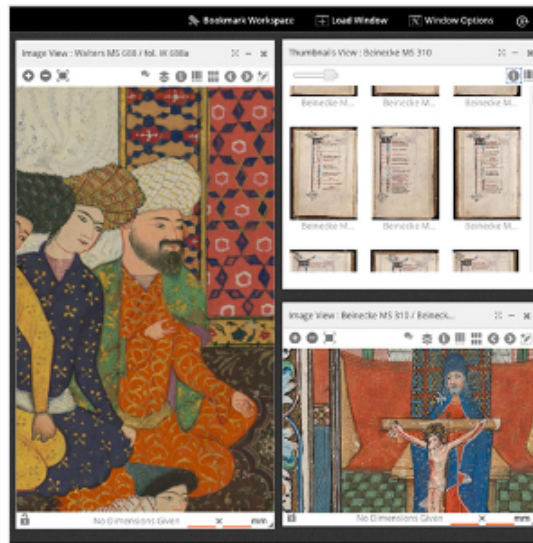

Standard API for DeepZoom (hi-res) images. Supported by many servers and viewers.

<http://iiif.io>

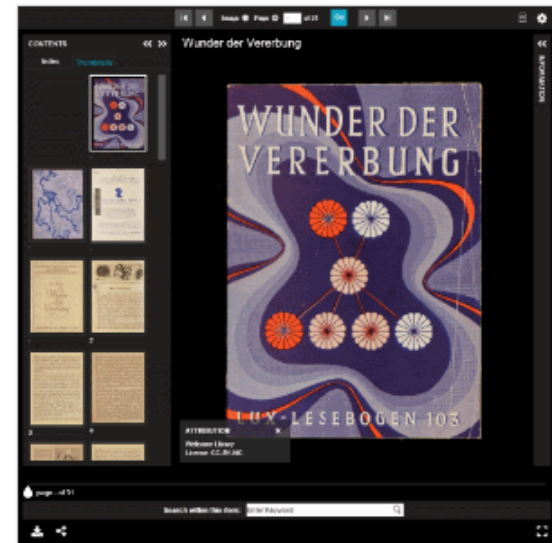

IIIF Showcase

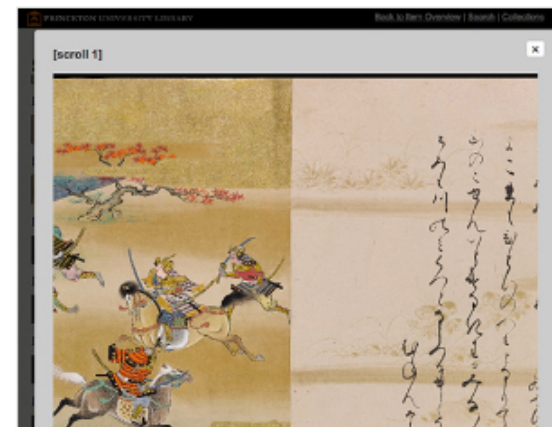

OpenSeadragon

Mirador Viewer

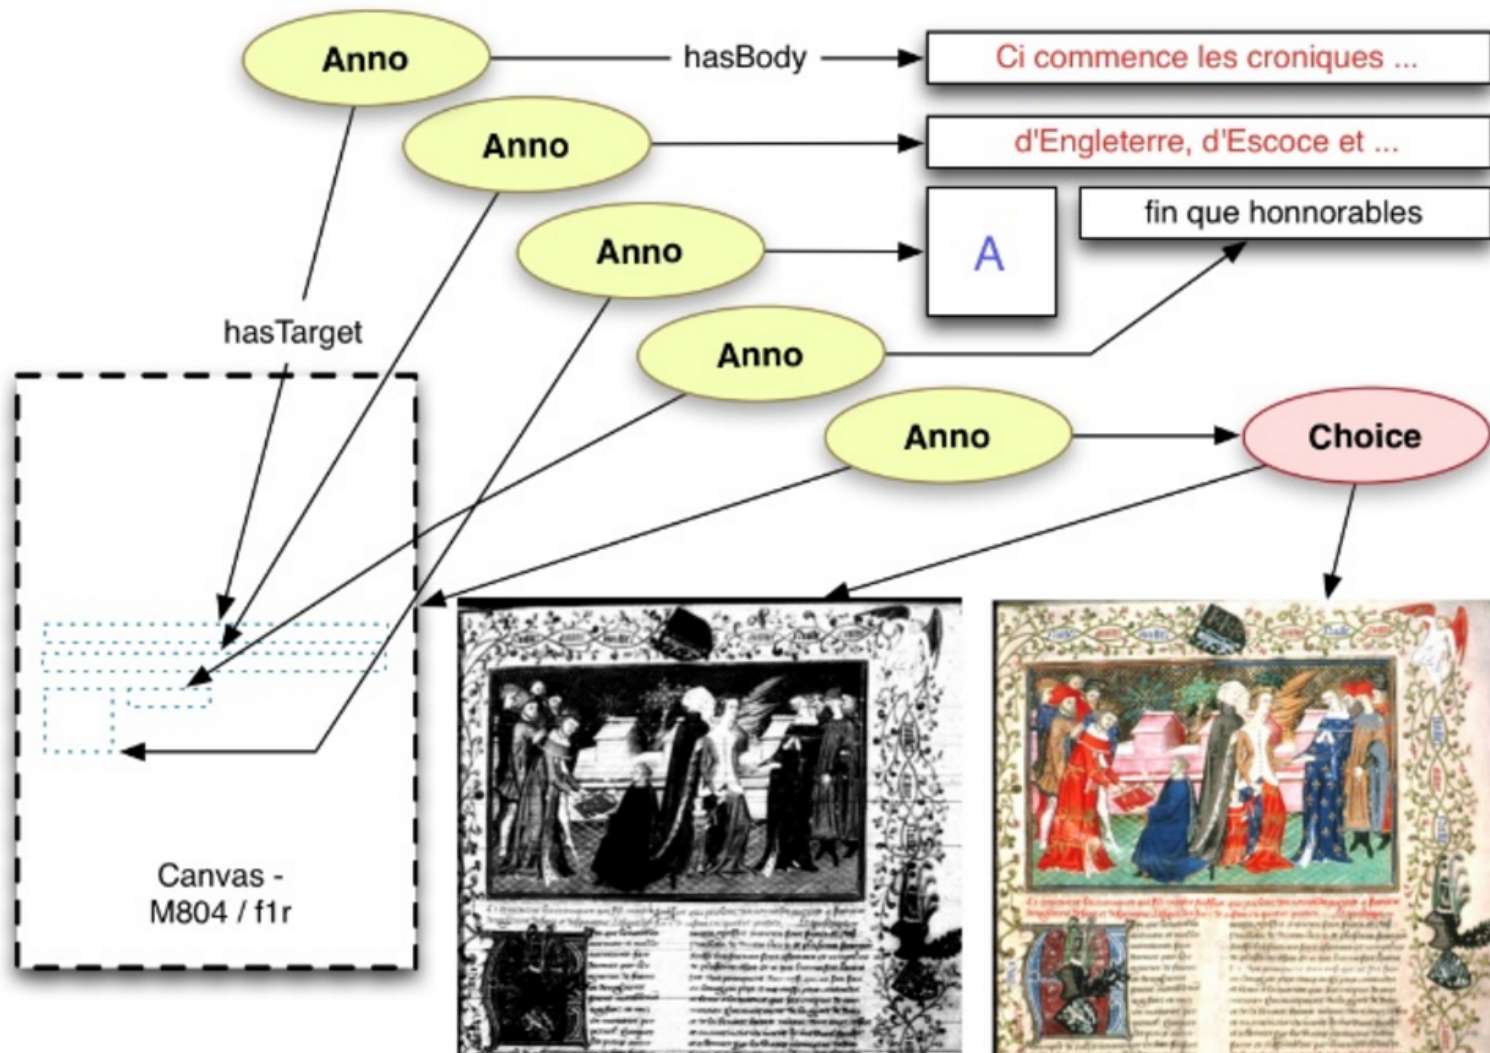

Universal Viewer

## 4.4.1 IIIF PRESENTATION API

Based on OA and SharedCanvas. Strong attention to JSONLD representation (convenient for developers). Allows to assemble manuscripts from pieces, present folios, etc etc. See [Rob Sanderson presentations](#), eg [IIIF](#) and [JSONLD](#):

## 4.5 LIBRARY ONTOLOGIES

War of the Bibliographic Ontologies?

- **BIBO**: used for a long time, pragmatic
- **FRBRer**: pragmatic realization of FRBR, but little uptake (not rich enough?)
- **FRBRoo**: based on CIDOC CRM, perhaps too complex
- **Fabio, Cito, Doco** and friends: modern, includes new features (eg citation intent)
- **BibFrame**: sponsored by LoC, but **soundly criticized** for modeling mistakes
- **RDAregistry.info**: basic FRBR classes, numerous properties for all kinds of things.  
Used for 100M records at TEL
- **SchemaBibEx** (<http://bib.schema.org>): steps on a clean model sponsored by the big 4 search engines (Google, MS Bing, Yahoo, Yandex.ru). Developed by OCLC. May end up being used for 300M records at WorldCat.

## 4.5.1 RDAREGISTRY

### Resource Description and Access (RDA). Registry info is well organized

#### RDA Registry

- [RDA Registry](#) (Home)
- [Elements](#) (RDA element sets)

#### Welcome to the RDA Registry!

The RDA Registry contains linked data and Semantic Web representations of the elements and relationship designators approved by the [RDA Steering Committee](#) (RSC).

For details of the latest release see [Release 2.5.2](#).

#### Downloads

- [v2.5.2](#) (zip)
- [v2.5.2](#) (tar.gz)

The RDA Registry is based on the [Open Metadata Registry](#). It is maintained by the RSC and [Metadata Management Associates](#) in association with [ALA Digital Reference](#).

Please use the contacts below for more information. Remember that questions or comments about individual RDA elements or concepts can be easily made by using the OMR feedback button on the far right center of the page describing the individual property (it is orange, with white lettering).

Contacts:

- [RSC: Gordon Dunsire](#)
- [MMA: Diane Hillmann](#)
- [OMR technical issues: Jon Phipps](#)
- [ALA Digital Reference: James Hennelly](#)

If you discover a problem with the representations of the RDA vocabularies, or have a question, or even wish to engage in a philosophical or practical discussion, please [raise an issue!](#)

[View the project on GitHub.](#)

## 4.5.2 RDAREGISTRY PROPERTIES

Many props (306 for Work alone), for specific purposes (eg "appellee" for court decisions, "granting institution" for academic theses). Numeric prop names, but lexical (natural language) also supported. Serves many semantic formats.

### Work properties

The Work properties element set consists of properties representing the attributes and relationships of the RDA Work entity. Each property in the element set has a domain of the class representing this entity.

Number of elements:	297
Namespace:	http://rdaregistry.info/Elements/w/
Suggested prefix:	rdaw
Example curie (canonical)*:	rdaw:P10001
Example curie (lexical)*:	rdaw:respondent
Changelog feed:	<a href="#">Atom</a>   <a href="#">RDF</a>

\*All RDA URIs have both an immutable canonical form and a "readable", lexical form, which is subject to change (changes will be redirected).

### 4.5.3 A TASTE OF FRBROO

EDM–FRBRoo Application Profile Task Force: asked what to add to EDM to better fit FRBRoo.

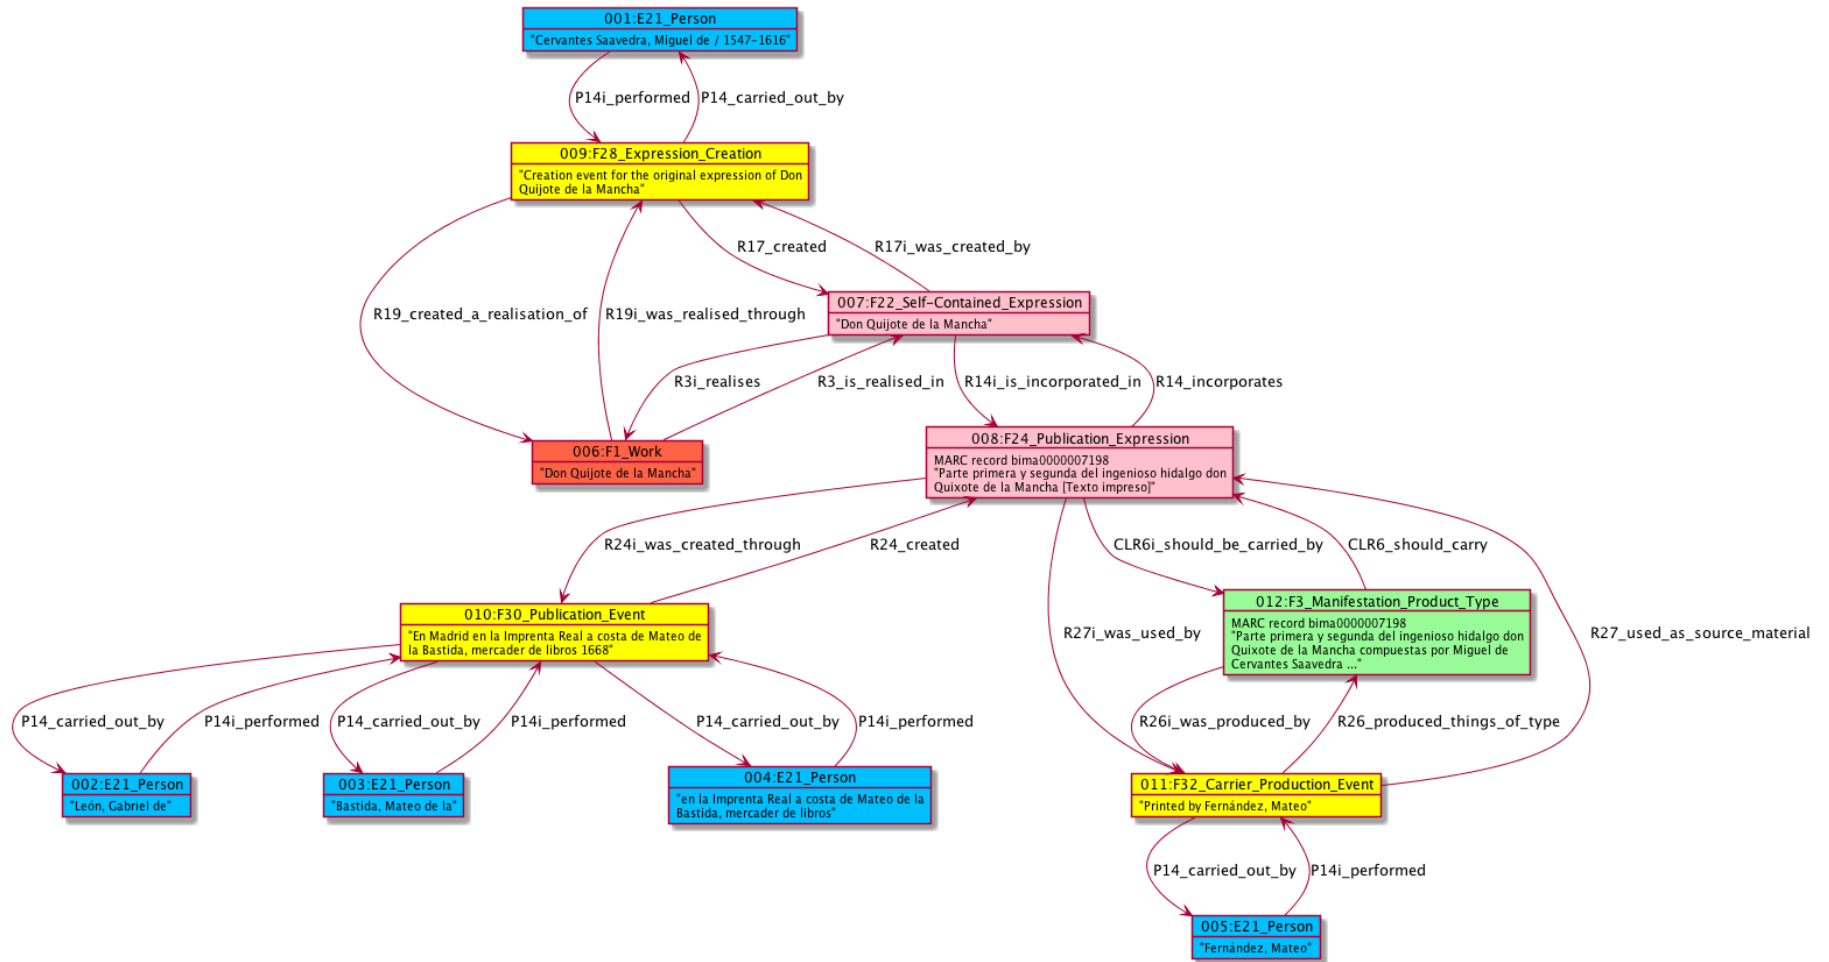

- TF members developed a number of examples, eg on publications of "Don Quixote" (T.Aalberg, V.Alexiev, J.Walkowska).

EDM variant:

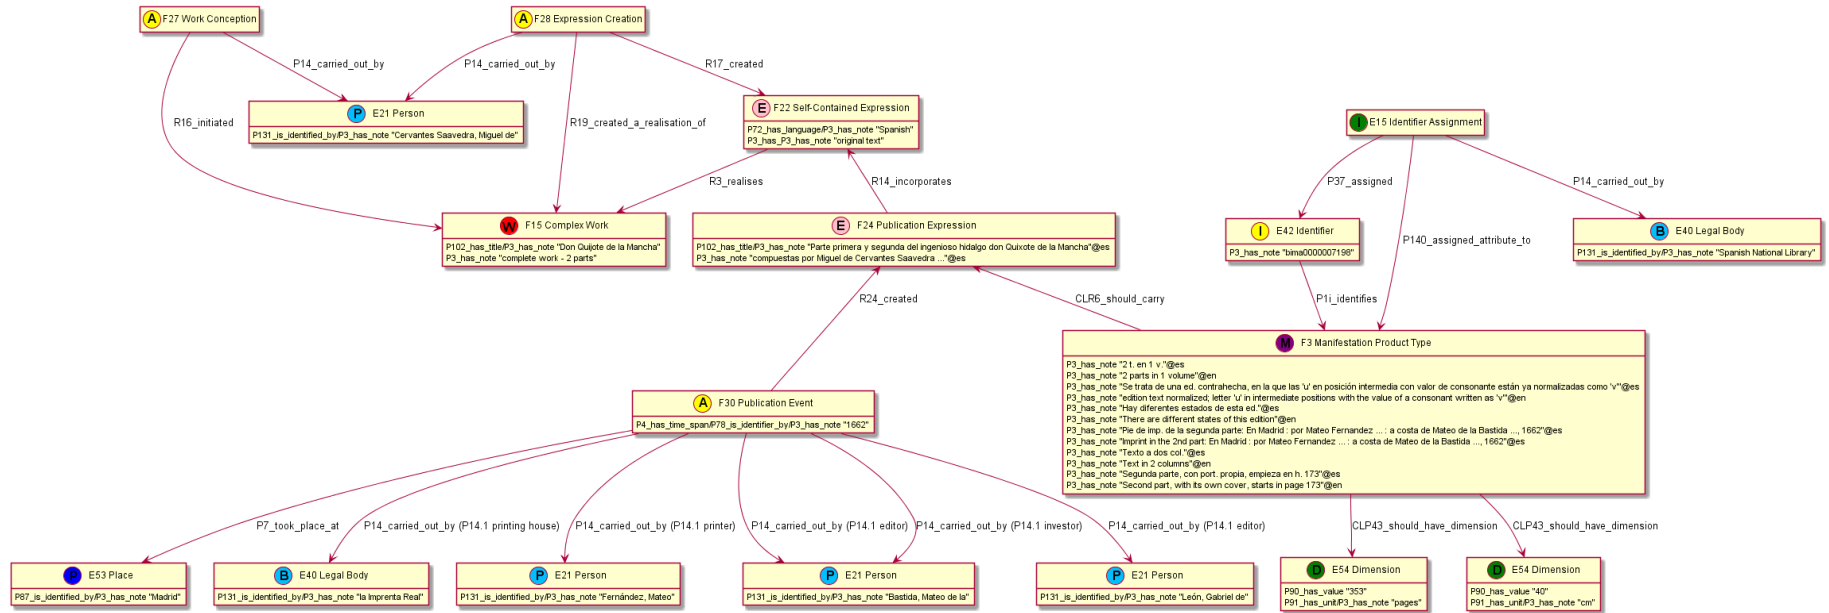

## 4.5.3.1 A TASTE OF FRBROO

Simpler FRBRoo variant:

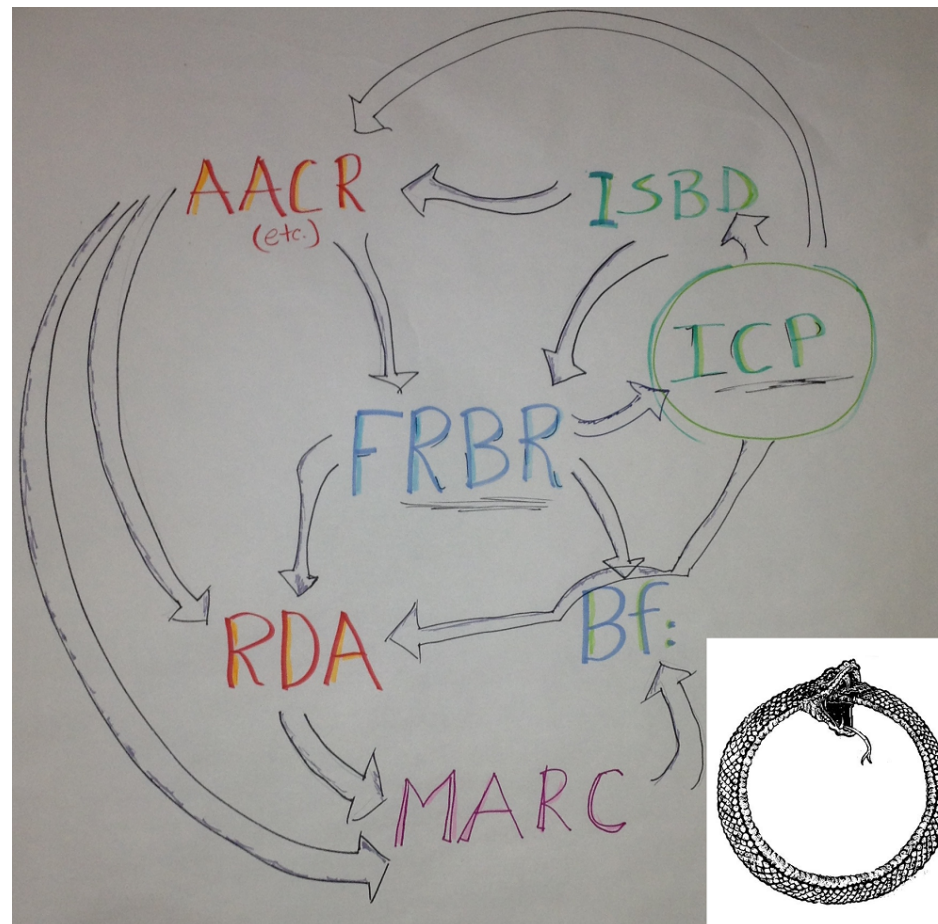

## 4.5.3.2 A TASTE OF FRBROO

More complex FRBROo variant:

#### 4.5.4 FRBR-INSPIRED

- "FRBR, Before and After" by K.Coyle (ALA 2016) is an in-depth look at FRBR-inspired models/realizations.
- Chapter 10 describes the following ontologies: FRBRer, FRBRcore, FaBiO, <indec>, BIBFRAME, RDA in RDF, webFRBRer, FRBRoo
- "Mistakes have been made", K.Coyle, SWIB 2015

# 4.5.5 BRITISH LIBRARY DATA MODEL

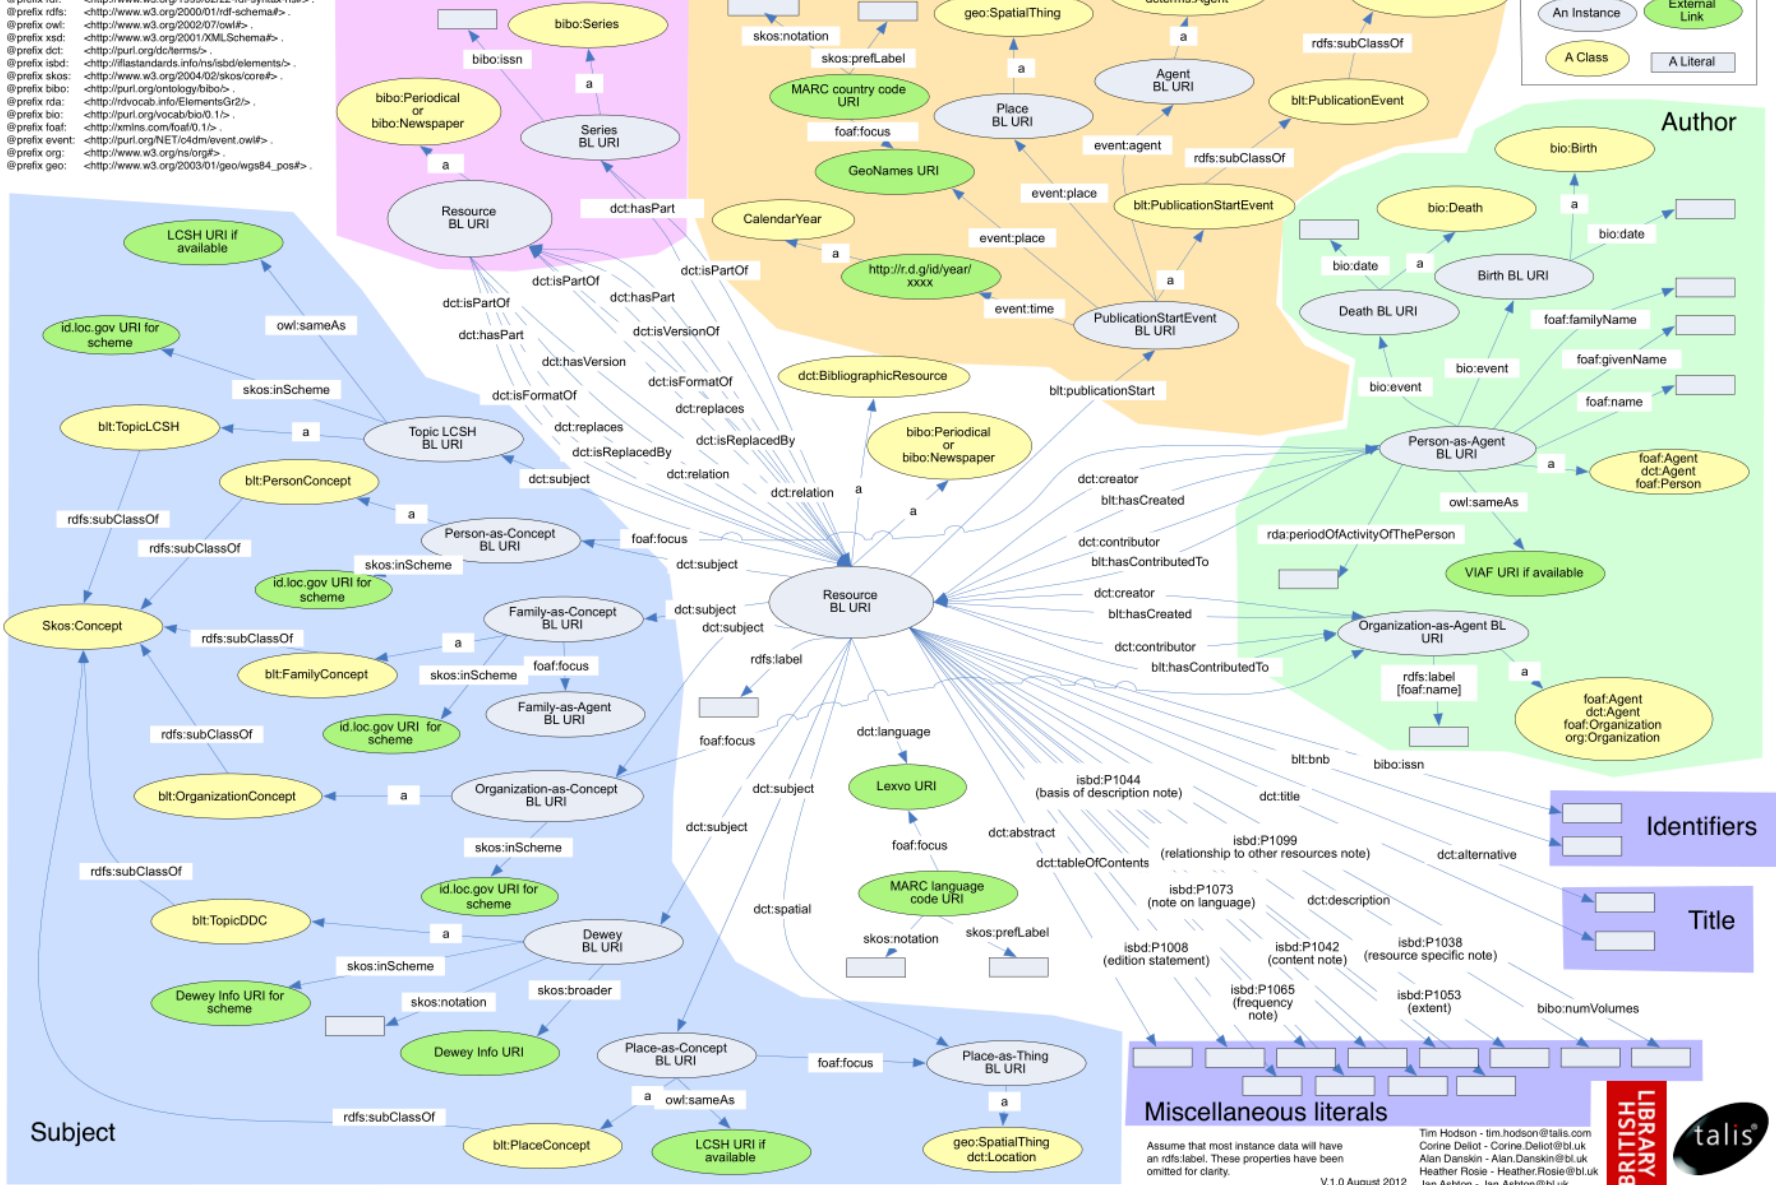

## Pragmatic data model that reuses several ontologies, and adds own props

### British Library Data Model - Serial

### Bibliographic Relationships

### Publication Events

## 4.5.6 FIRST LIBRARY THAT RUNS ON RDF

Oslo Public Library (<http://data.deichman.no>, since 2014) uses Koha open source software, RDF in the core, and [marc2rdf/rdf2marc](#) conversions. Pragmatic data model that reuses several ontologies, and adds own props. Enables a number of agile apps, eg search related books on Kiosk

## 4.5.6.1 OSLO PUBLIC LIBRARY DATA

```

## 4.6 ARCHIVAL ONTOLOGIES

3 attempts to represent EAD as RDF, but IMHO neither is very good.

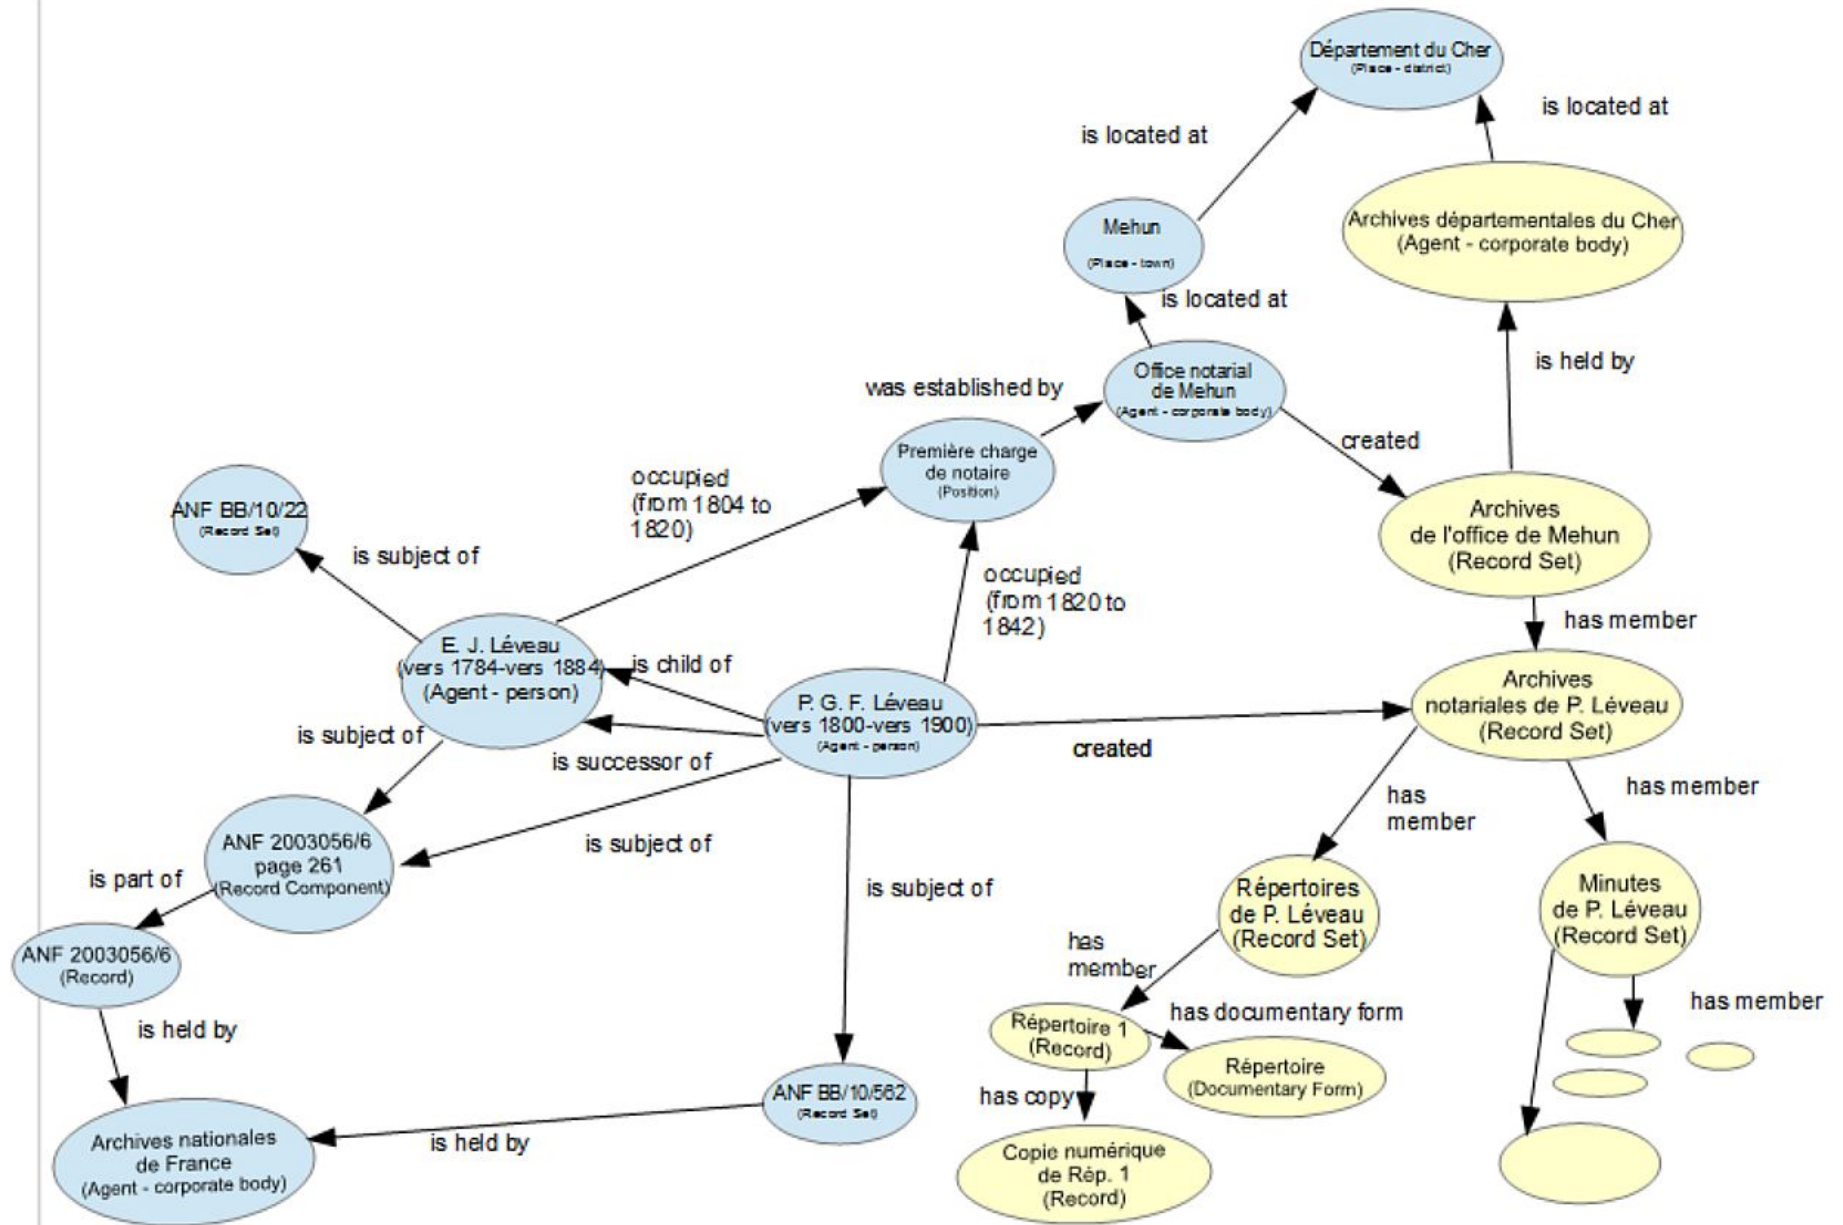

- Eg "The Semantic Mapping of Archival Metadata to the CIDOC CRM Ontology" (Journal of Archival Organization, 9:174–207, 2011) proposes to represent the EAD levels hierarchy (from Fonds down to Items) as **five** parallel CRM hierarchies

Records in Context (RiC): new upcoming semantic standard by ICA

- Addresses the scope of EAD, EAC, EAG in one framework. Inspired by national standards, FRBR (FRBR-LRM), CIDOC CRM
- [Progress report](#) (2015), [Mlist for comments](#)
- [Conceptual Model 1.0](#) (Sep 2016): Document key components of archival description, properties of each, relations between them
- **Ontology**: after finalizing the Conceptual Model, Expressed in OWL, will include semantic mapping to similar concepts developed by related communities

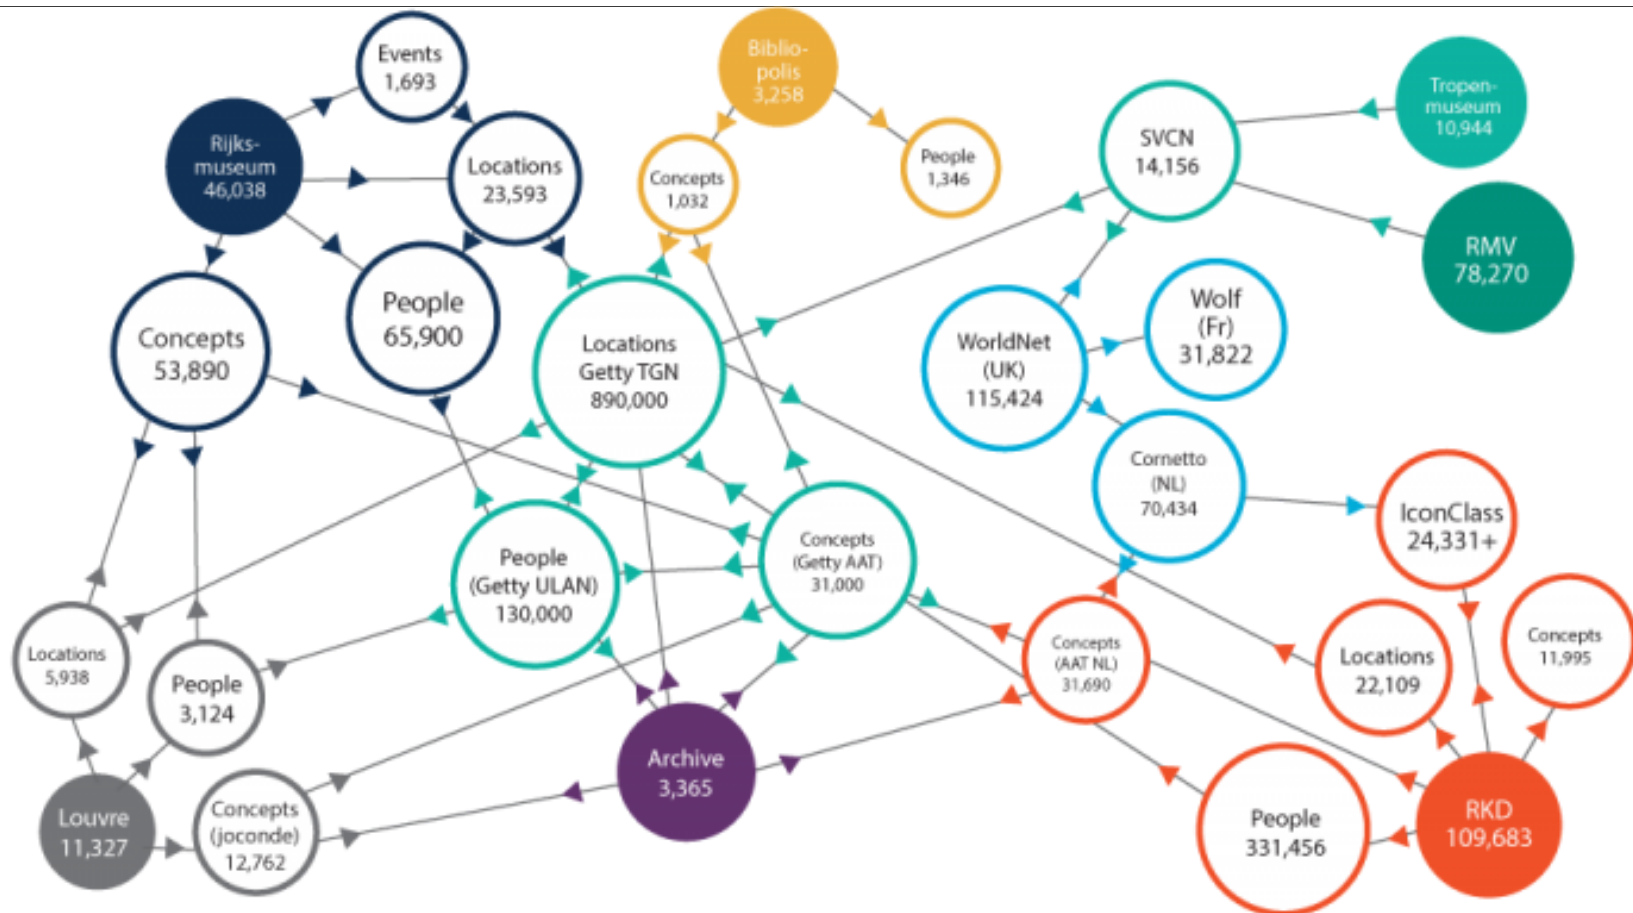

## 4.6.1 RIC SAMPLE NETWORK

# 5 GLAM LOD DATASETS (LODLAM)

- Some established thesauri and gazetteers as LOD, some are interconnected: DBPedia; Wikidata, VIAF, FAST, ULAN; GeoNames, Pleiades, TGN; LCSH, AAT, IconClass, Joconde, SVCN, Wordnet, etc.
- Not shown: large collection LODs like: Europeana (EDM), British Museum (CIDOC CRM), YCBA (CIDOC CRM), Rijksmuseum (EDM)
- (Diagram based on work by M.Hildebrand)

# 5.1 WIKIDATA

Tons of info on everything, including GLAMs, artists, artworks, etc. Eg [Frans Hals on Reasonator](#)

Painter from the Northern Netherlands

**Frans Hals** was a Dutch-Belgian painter. He was born in 1582 in Antwerp to Franchois Franz. Hals van Mechelen and Adriaentje van Geertenryck. His field of work included portrait and portrait painting. He was a member of Haarlem schutterij and Haarlem Guild of St. Luke. He married Anneke Hermansz and Lysbeth Reyniers. His children include Adriaentje Hals, Harmen Hals, Frans Hals Junior, Jan Hals, Reynier Hals, and Nicolaes Hals. He died on August 26, 1666 in Haarlem. He was buried at Grote Kerk.

## 5.1.4 YOU CAN HELP TOO!

Hunting for missing inventory numbers (9.9k of 140k). Important because <collection, inventory number> is used to identify the painting. Eg [US](#) (1k), [Getty Museum](#) (2)

label	description	image	creator	inventory number	collection	described at URL
<a href="#">An Italianate Landscape with Travelers on a Path</a>	painting by Jan Both		<a href="#">Jan Both</a>		<a href="#">J. Paul Getty Museum</a>	
<a href="#">Porträt des Julien de La Rochenoire</a>			<a href="#">Édouard Manet</a>		<a href="#">J. Paul Getty Museum</a>	

## 5.1.5 LET'S FIX THE SECOND ONE

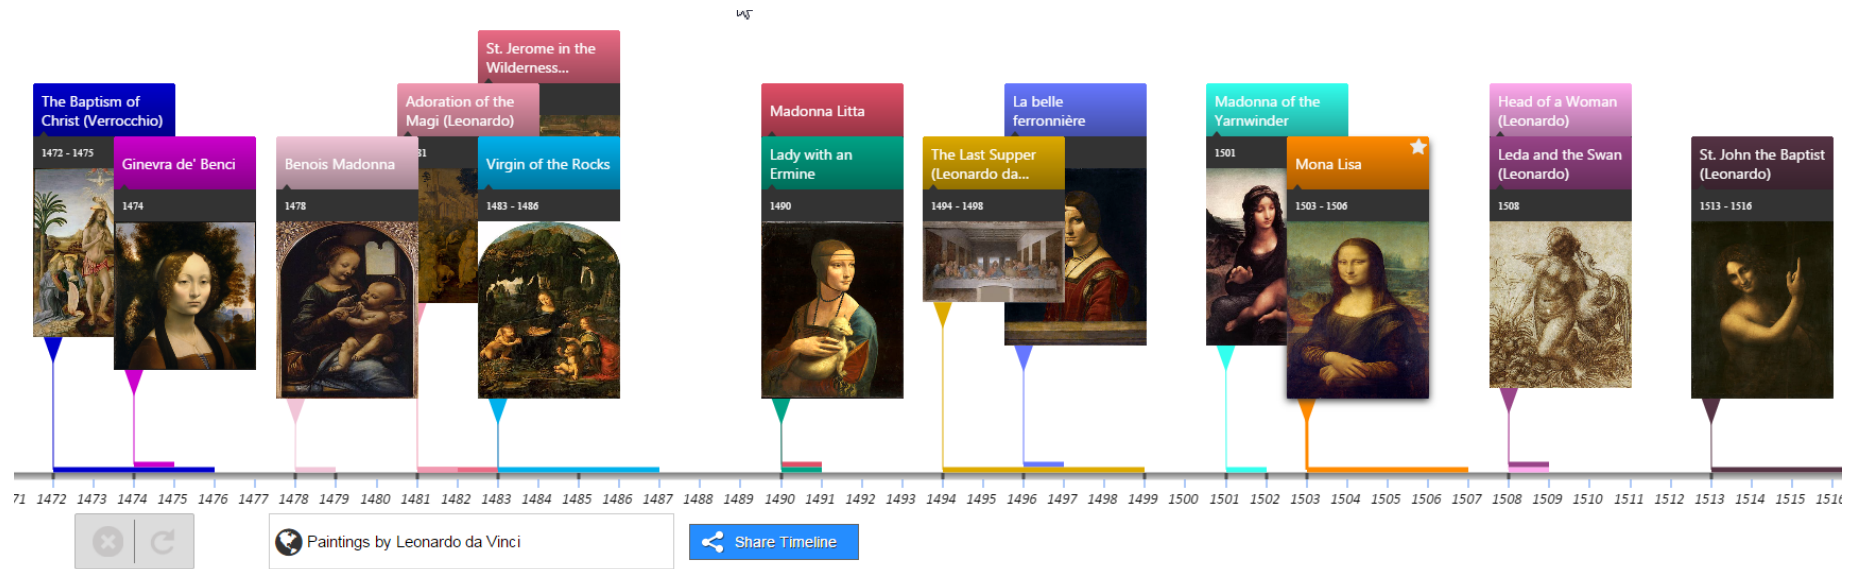

Find it on Getty's site, add the info like this:

collection	 J. Paul Getty Museum ▼ 0 references	 edit  + add reference  + add
described at URL	 <a href="http://www.getty.edu/art/collection/objects/265936/edouard-manet-portrait-of-julien-de-la-rochenoire-french-1882/">http://www.getty.edu/art/collection/objects/265936/edouard-manet-portrait-of-julien-de-la-rochenoire-french-1882/</a>  ▼ 0 references	 edit  + add reference  + add
inventory number	 2014.20 ▼ 0 references	 edit  + add reference

## 5.1.6 HISTROPEdia

### Timelines of everything. Eg paintings by Leonardo

## 5.2 VIAF

Virtual International Authority File: 20 national libraries, 10 other contributors including Getty ULAN and Wikidata. Eg coreferencing cluster of Spinoza:

Preferred Forms

-  [100 †a Spinoza, Baruch, †d 1632-1677](#)
-  [100 †a Spinoza, Benedictus <sup>00</sup>de<sup>00</sup> †d 1632-1677](#)
-  [100 †a Spinoza, Benedictus de, †d 1632-1677](#)
-  [100 †a СПИНОЗА, БАРУХ, †d 1632-1677](#)
-  [100 †a ברוך בן מיכאל, †d 1632-1677](#)
-  [100 †a Spinoza, Baruch, †d 1632-1677](#)
-  [100 †a Spinoza, Benedictus de](#)
-  [200 †a Spinoza †b Baruch †f 1632-1677](#)
-  [100 †a †d 1632-1677 سپینوزا، بنديكت دو،](#)
-  [100 †a Spinoza, Benedictus de, †d 1632-1677](#)

**National Library of Israel (Hebrew)**  
J9Uheb|000187093

## 5.2.1 VIAF VS WIKIDATA (2015)

## 5.3 GLOBAL AUTHORITY CONTROL

- 201307 [Authority Addicts: The New Frontier of Authority Control on Wikidata](#), Wikimania 2013
- 201501 [Wikidata Project Authority Control](#) (initiated by Ontotext)
- 201503 [Name Data Sources for Semantic Enrichment](#) study for Europeana of datasets including Person/Organization names. Conclusions:
  - The best datasets to use for name enrichment are VIAF and Wikidata
  - There are few name forms in common between the "library-tradition" datasets (dominated by VIAF) and the "LOD-tradition datasets" (dominated by Wikidata)
  - VIAF has more name variations and permutations, Wikidata has more multilingual names (translations)
  - VIAF is much bigger: 35M persons/orgs. Wikidata has 2.7M persons and maybe 1M orgs
  - Only 0.5M of Wikidata persons/orgs are coreferenced to VIAF, with maybe another 0.5M coreferenced to other datasets, either VIAF-constituent (eg GND) or non-constituent (eg RKDartists)
  - A lot can be gained by leveraging coreferencing across VIAF and Wikidata
  - Wikidata has great tools for crowd-sourced coreferencing

### 5.3.1 NAMES OF LUCAS CRANACH

Analyzed records of Lucas Cranach in 7 LOD datasets (Wikidata: Freebase, DBpedia, Yago; VIAF: ISNI, ULAN).

### 5.3.2 WIKIDATA COREFERENCING CAN ENLARGE VIAF

## VIAF-Wikidata Coreferences for Lucas Cranach

# 6 LODLAM PROJECTS

GLAM and DH projects present a bewildering variety, eg

- Publishing Vocabularies/Thesauri as LOD
- Publishing Museum collections and National Bibliographies as LOD
- Enrichment of GLAM metadata with relevant thesauri, semantic and faceted search
- Study of artistic influence over time and space
- Literary traditions, parallel editions
- Poetic repertories
- Studying manuscripts, stematology (manuscript derivation)
- Historiography
- Studying charters, prosopography ("micro biographies"). "Prosopography is Greek for *Facebook*", [SNAP:DRGN project](#), 2015

Research functions and sometimes integrated into Virtual Research Environments

## 6.1 MELLON 'SPACE' PROJECTS

The Andrew Mellon Foundation funds many projects in CH and DH, and a few software projects, including:

- **CollectionSpace**: museum collection management
- **ArchiveSpace**: archive management
- **ResearchSpace**: semantic integration based on CIDOC CRM, search, data & image annotation, data basket, etc
- **ConservationSpace**: line of business application for conservation specialists

## 6.2 RESEARCHSPACE

Executed by the British Museum. Ontotext developed the first prototype (2010-2013).  
Semantic Search

## 6.2.6 RESEARCHSPACE DATA ANNOTATION

The screenshot displays the ResearchSpace web application interface. At the top, there is a navigation bar with 'Projects', 'Tools', 'Jana', and 'Bookmark web link in RG' on the left, and 'Databasket' on the right. Below this is the 'ResearchSpace' header with a search bar. The main content area shows the object details for 'WCO25315 Black stone stamp-cylinder seal; predatory...'. The 'Object Details' tab is active, showing a 'Basic' dropdown menu and a description: 'Black stone stamp-cylinder seal; predatory birds (eagles?) clutching in their talons, plus a coiled snake on the stamp base'. A 'New Annotation' dialog box is open in the foreground, with the following fields: 'Title' (stamp-cylinder seal WCO25315 Black stone stamp-cylinder seal; predatory...), 'Referred value' (The British Museum), and 'Suggested value' (Fund Ex). A dropdown menu is open below 'Suggested value', listing several exploration funds: Egypt Exploration Fund, Palestine Exploration Fund, Carchemish Exploration Fund, Corbridge Excavation Fund, Fund for Exploring Pudding Pan Rock, and Cyprus Exploration Fund. The background shows the 'Current owner' as 'The British Museum' and the 'Current keeper' as 'The British Museum' and 'BM Department Middle East'. On the right side, there is a 'Related Content' section with an image of the seal and a 'Documents' section with a placeholder 'Lorem ipsum'.

## 6.2.7 RESEARCHSPACE DATA ANNOTATION MODEL

## 6.2.8 IMAGE ANNOTATION

The screenshot displays the Rembrandt web application interface for image annotation. The top navigation bar includes 'Projects', 'Tools', 'Administrator', 'Bookmark web link in RS', and 'Databasket'. The main header shows the project name 'Rembrandt' and a search bar. Below the header, the current project is identified as 'MMA\_0000\_061\_198\_xray\_2006\_composite'. The interface features tabs for 'Image details', 'Annotations', and 'Relations'. A toolbar with various drawing tools and a color palette is positioned above the image. The central image shows an X-ray of a pendant with a red circle and blue dots indicating an annotation. A 'New Annotation' dialog box is open, containing a title field with the text 'Canvas is thin here', a rich text editor with the content 'Canvas is thin. Damaged by fire in 1825.', and a dropdown menu for selecting an annotation type. The dropdown menu lists several options, including 'Canv', 'canvas [BM Material]', 'Canvey Island [BM Place]', 'canvas [RKD Material (Support/Frame)]', 'John Canvty [BM Person/Institution]', 'canvaigre root [BM Material]', 'canvas on board [RKD Material (Support/Frame)]', 'canvas on cardboard [RKD Material (Support/Frame)]', and 'canvas on chipboard [RKD Material (Support/Frame)]'. An 'Add' button is next to the dropdown. To the right, an 'Annotations' panel shows a list of annotations for the current image, including the one just created, with a date and user name. The bottom of the image has a zoom slider.

## 6.2.9 IMAGE ANNOTATION MODEL

## 6.2.10 IMAGE ANNOTATION ARCHITECTURE

## 6.3 BRITISH MUSEUM (BM) AND YCBA LOD

- GraphDB runs the BM SPARQL endpoint. One of the biggest CH RDF collections (917M triples)
- As part of RS, developed mapping of BM data (2M objects) with BM, using CIDOC CRM
- This mapping was followed by the Yale Center for British Art (YCBA)
- **Mapping Documentation:** very comprehensive but is monolithic and has imprecisions. Includes the (in)famous diagram

### The Conceptual Reference Model Revealed

Quality contextual data for research and engagement: A British Museum case study

Dominic Oldman, Joshan Mahmud, Vladimir Alexiev

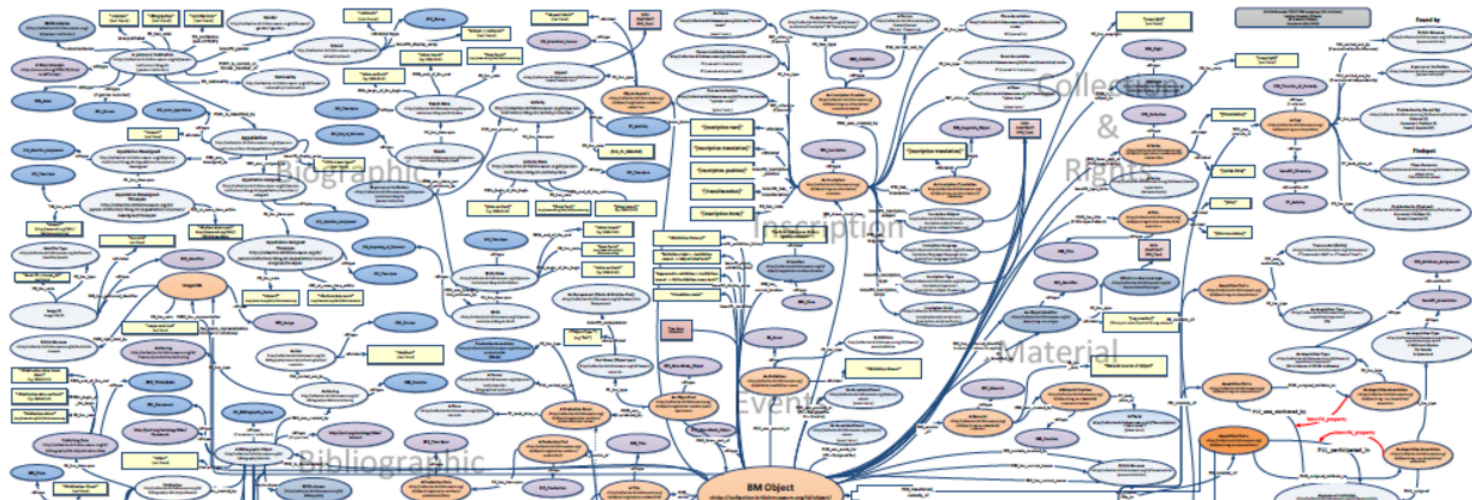

Version: Draft: 0.98, July 2013 (Confidential & Private – Limited Distribution for Discussion)

Contents: 359p

- 169: Main body, including discussion, illustrations and mapping diagrams
- 7p: Association Codes (see details at [BM Association Mapping v2](#))
- 49p: Example Object Graph
- 134p: RDFS configuration files (i.e. mapping implementation)

### Overall Picture

[mapping manual-diagram.pdf](#), [mapping manual-diagram.png](#) (Page 9 of 359)

# 6.4 CONSERVATIONSPACE

Executed by a consortium led by US National Gallery of Art. Developed by Sirma ITT (Ontotext sibling). Based on Ontotext GraphDB (semantic metadata), Alfresco (document management), Smart Documents (Sirma product).

The screenshot displays the National Gallery of Art's ConservationSpace interface. The top navigation bar includes the National Gallery of Art logo, a search bar, and a 'Create' button. The left sidebar shows a 'Browser' with a tree view of folders: Major In-house Treatments, Cases, Madame Stumpf and her Daughter, Objects, (Painting) Madame Stumpf and her Daughter, Documents, Scientific analysis/Notes, Examination documents, Images, Tasks, and Workflows.

The main content area is titled '(Painting) Madame Stumpf and her Daughter' and includes a breadcrumb trail: 'My dashboard > Major In-house Treatments, Painting Department, 2014 > Madame Stumpf and her Daughter >'. Below the title is a small thumbnail of the painting and an 'Edit' button. The page is divided into tabs: 'Content', 'Images', 'Documents', and 'Relations'. The 'Images' tab is active, showing a section titled 'Before treatment images' with four thumbnails: 'The hand of Madame Stumpf.png', 'The face of Madame Stumpf.png', 'The daughter's face.png', and 'Subscription.png'. Below this is an 'Annotated image' section with a toolbar for editing annotations (including tools for drawing lines, rectangles, circles, and text) and a large image of the painting with three annotations: a red circle, a yellow square, and a blue circle.

On the right side, there are several panels: 'Special Permissions', 'Inherited Permissions', 'Management Permissions', 'Version History' (showing 'Last version' as 'Irises.png' by 'maria.todorova 45 day(s) ago'), 'Annotations' (with a filter set to 'Date Modified' and 'Displayed 1 out of 1'), 'Comments' (with two comments from Albert Marshall and Roya Mahnat), and 'Properties' (listing 'Type: Before Treatment Photography', 'Title: Madame Stumpf and her...', 'Description:', 'Name: The daughter's face', 'Mimetype: image/png', and 'Size: 566.1kB').

# 6.5 EUROPEANA LOD AND OAI PMH

Ontotext created and hosted the Europeana SPARQL and OAI PMH services

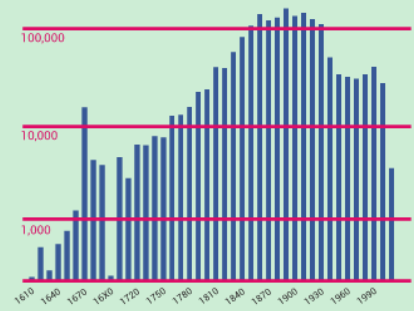

aggregator → aggregator → aggregator → **OAI client** → **Europeana**

**OAI client** → **API v2** (<http://labs.europeana.eu/api/console/>)

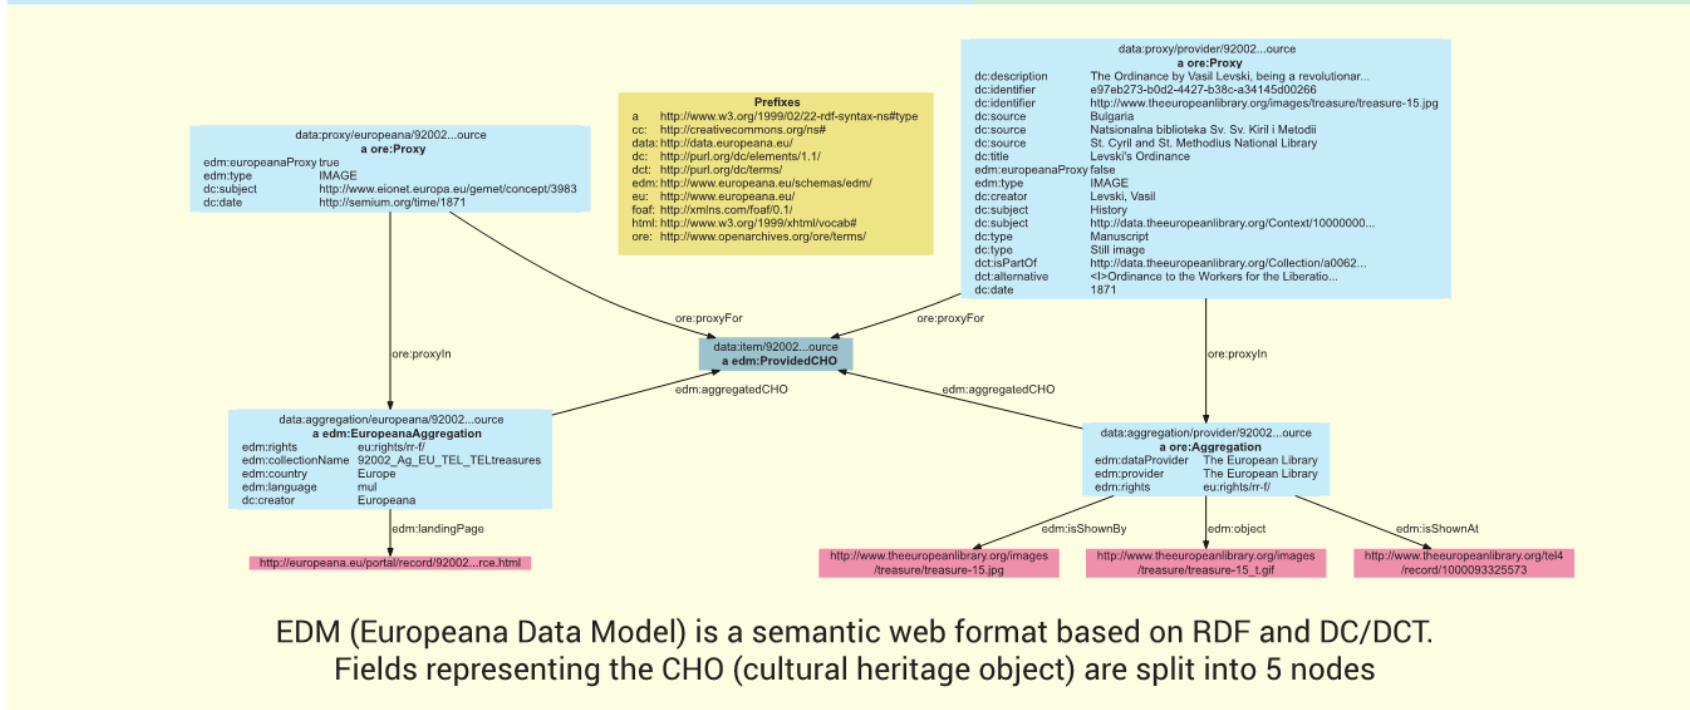

**OAI client** → **OAI server** (<http://oai.europeana.eu/oai/oaicat>)

**OAI client** → **SPARQL** (<http://europeana.ontotext.com/>)

Ontotext added 2 additional channels to Europeana Labs:  
**OAI & SPARQL**, complementing the existing **API**

Using SPARQL for analytics: charting millions of Europeana Newspapers, spanning from 1618 to present

EDM (Europeana Data Model) is a semantic web format based on RDF and DC/DCT. Fields representing the CHO (cultural heritage object) are split into 5 nodes

## 6.5.1 EUROPEANA STATISTICS

Eg chart of newspapers (several millions) by year: can't do this using the Europeana API, but is easy with SPARQL

## 6.6 EUROPEANA FOOD AND DRINK

Food & Drink content, semantically enriched (place and FD topic). [EFD Semantic App](#): open data, SPARQL endpoint, open source (Github). Uses GraphDB and ElasticSearch enterprise connector

**europeana**  
food and drink

made with europeana

ABOUT FOOD TRAILS BOOKS PICTURE LIBRARY GAMES CAKE EXHIBITION EDUCATION *Get involved!*

# SEMANTIC DEMONSTRATOR

The **Semantic demonstrator** demonstrates the use of semantic technologies for classification and discovery of Europeanana objects related to Food and Drink; it aims to provide semantic enrichment, i.e. extract references to Food and Drink topics from free text in object metadata to strengthen the relevance of database search results on the theme of Food and Drink.

The application does this by applying a Europeanana Food and Drink Classification scheme to Cultural Heritage Objects, such as those stored in **Europeanana** to yield more precise groupings, relationships and categorisations for database items.

Europeanana Food & Drink

Click here to visit the Semantic Demonstrator

- Showcases enrichment, faceted semantic search

## 6.6.3 EFD ENRICHMENT: FD GAZETTEER

Use Wikipedia Categories to extract a FD Gazetteer.

- "Domain-specific modeling: Towards a Food and Drink Gazetteer", Tagarev, A.; Tolosi, L.; and Alexiev, V, LNCS 9398, p182-196, January 2016 ([preprint](#))

→ Starting from dbc:Food\_and\_drink, you reach 887k cats, 26 levels deep, representing 80% of all categories

→ Most are irrelevant to FD (left: level 2, right: level 5)

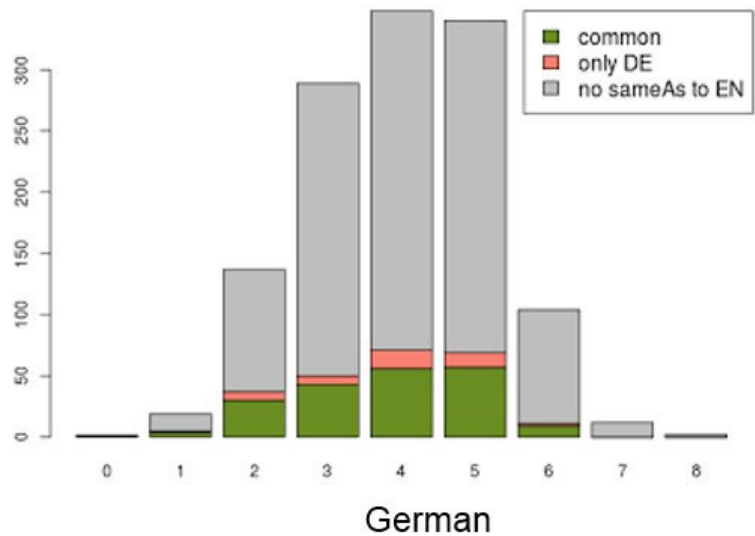

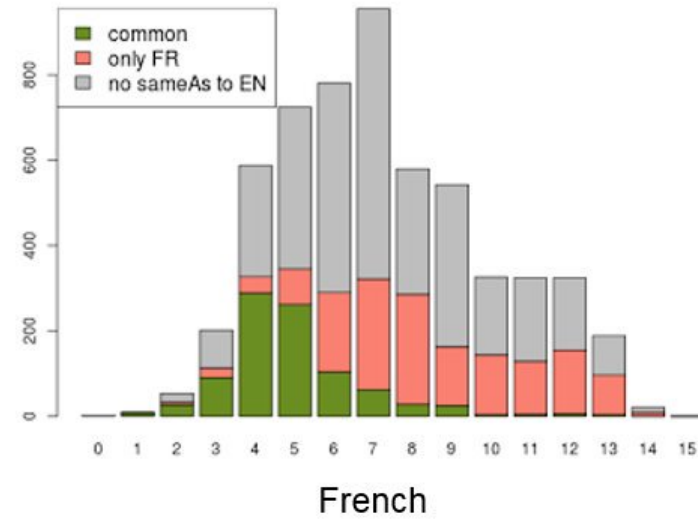

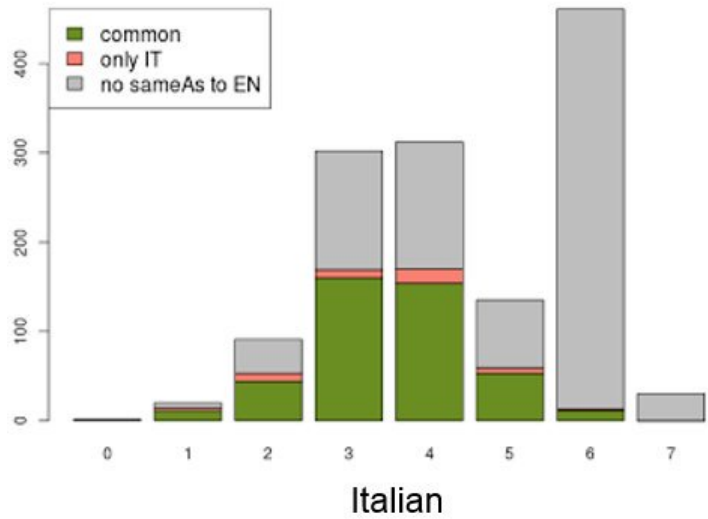

## 6.6.4 EFD ENRICHMENT: PRUNING FD CATEGORY TREE

- [Using DBPedia in Europeana Food and Drink](#). Alexiev, V. DBpedia meeting, February 2016.
  - Mix of approaches:
    - Statistical analysis of the category network
    - Manual curation (chopping out irrelevant branches: about 300)
    - Evidence-based feedback (CHOs, UMBEL, DBTax)
  - Reduced cats by 98%, level from 16 to 5 (reduce semantic drift)
    - Left relevant: 17.5k cats, 221k articles, ~900k labels

## 6.6.5 EFD ENRICHMENT: FRENCH

Selected French as second enrichment language after English, considering category overlap (work by L.Tolosi, x-axis is cat level), available content, NLP capabilities

## 6.6.6 EFD PLACE ENRICHMENT

We used standard Ontotext Concept Enrichment Service, which is a mix of DBpedia+Wikidata. But also had to add Geonames, to leverage the place hierarchy

# Using GeoNames for Parent Places

- Surprisingly, DBpedia doesn't have good Parent Place info:
  - No statement that Bulgaria and France are part of Europe.
  - Have classes `yago:MemberStatesOfTheEuropeanUnion`, `yago:EuropeanCountries`, `yago:EuropeanUnionMemberEconomies`, but no relation to `dbr:Europe`
- No uniform property. E.g. `dbo:City` has **`dbo:region`** and **`dbo:country`**, while `dbo:Island` (e.g. `dbr:Andaman_Islands`) has:
  - **`dbo:archipelago`** `dbr:Andaman_and_Nicobar_Islands` (physical parent)
  - **`dbo:location`** `dbr:Bay_of_Bengal` (physical parent)
  - **`dbp:countryAdminDivisions`** `dbr:Andaman_and_Nicobar_Islands` (admin parent)
  - **`dbo:country`** `dbr:India` (admin ancestor)
  - **`dbo:capital`** `dbr:Port_Blair` (admin child)
  - **`dbo:majorIsland`** `dbr:North_Andaman_Island`, `dbr:South_Andaman_Island` (physical child, partial)
- So we decided to use GeoNames, which has uniform property `gn:parentFeature`

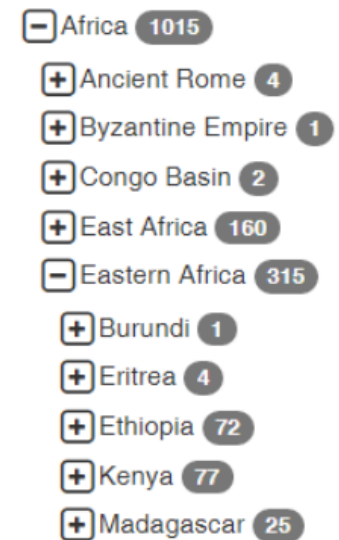

## 6.6.7 EFD PLACE ENRICHMENT

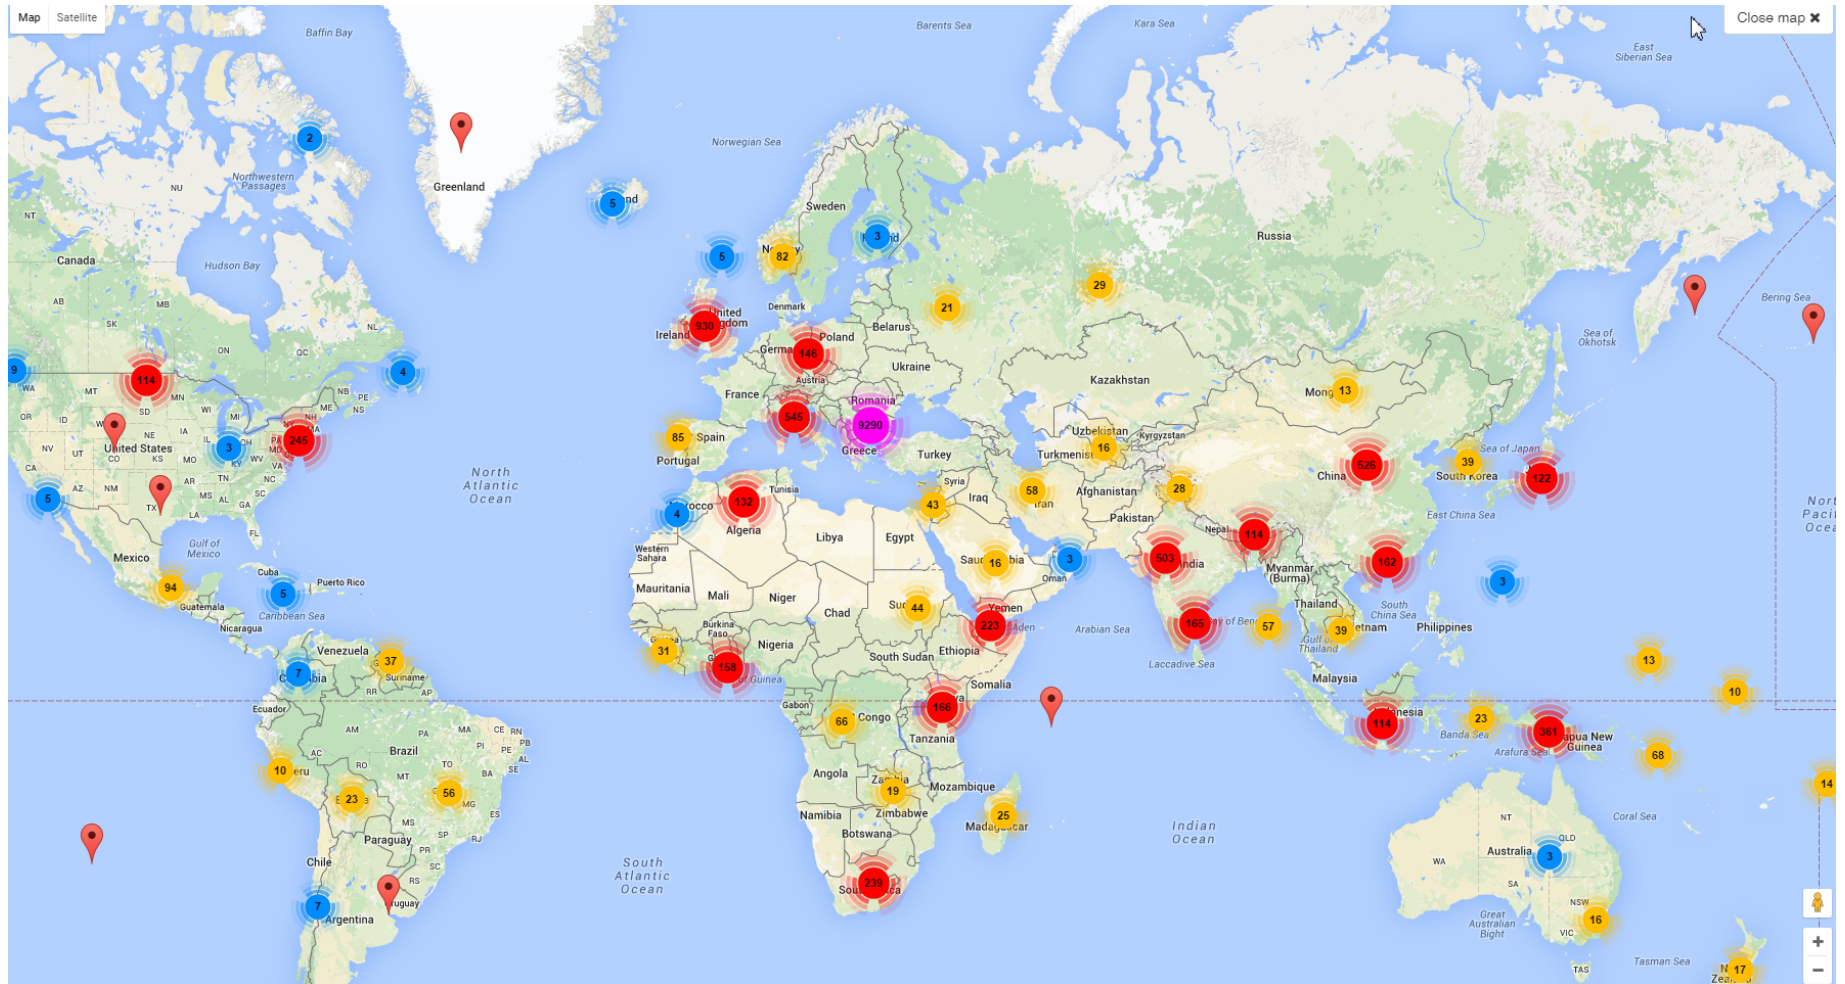

Hierarchical semantic facet based on Geonames

- GeoNames → Wikipedia/DBpedia links
  - Got from geonames.org, used script from Dbpedia
  - Coverage is about 65% (Wikidata has similar coverage)
  - Added 250 links (e.g. `dbr:Sloane_Street`  
`gn:parentFeature`  
`dbr:Royal_Borough_of_Kensington_and_Chelsea`)
- About 10 fixes to GeoNames on their site (e.g. North & South America were children of “America”...a small village)
- Loaded GeoNames & DBpedia in Ontotext GraphDB, used [owl:sameAs optimization](#) to merge (smush) the corresponding nodes
- Voila! A hierarchical semantic facet
  - Faceting is done by ElasticSearch, we use the [GraphDB-ElasticSearch Connector](#)

## 6.6.8 EFD GEOGRAPHIC MAPPING: CLUSTERING

Once we have places, it's relatively easy to map them. We used the Cluster Mapper library

## 6.6.9 EFD GEOGRAPHIC MAPPING: JITTERING

There are 9k objects marked "Bulgaria". We don't want all flags in the center of Bulgaria, so we jitter them up

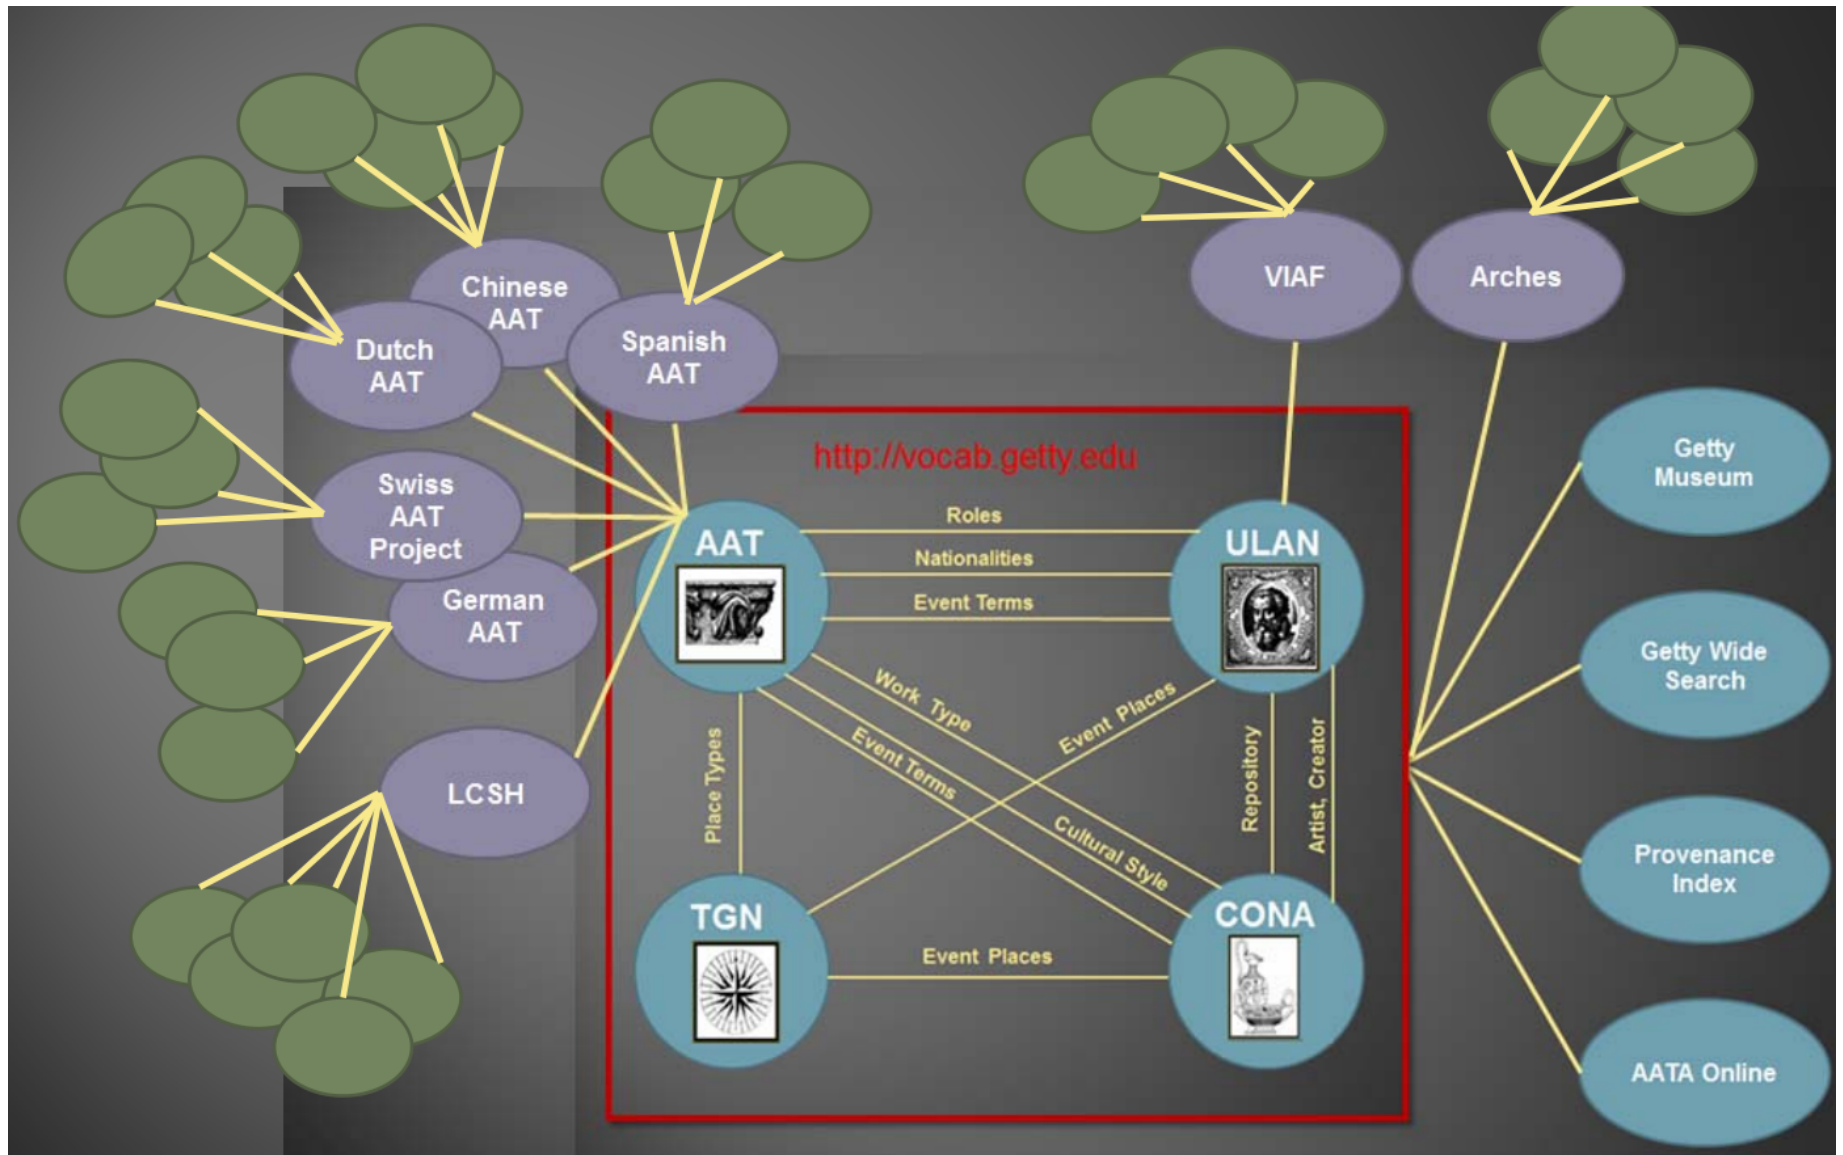

## 6.6.10 GLAMS WORKING WITH WIKIDATA

Why should GLAMs bother about Wikidata? Because it gives an excellent way to connect and expose your collection data to a multilingual audience

- [Europeana Wikimedia Taskforce report](#):
  - Recommendation 1: For every Europeana project, considering the possible benefits of a Wikimedia component should be default behavior
  - Recommendation 7: Make Wikidata a central element of Europeana's "portal to platform" strategy
  - Recommendation 8: Europeana should continue to invest in technology that improves the interoperability between GLAMs and Wikimedia platforms
- [GLAMs Working with Wikidata](#): easily add content about a colorful tradition "blessing of the baskets" ("swiecenie koszyczek" or just "Święconka" in Polish). With proper cats: when we merge them across languages (pl, en, de), we discover the content is about Food and Drink, Easter, and a Polish tradition

## 6.7 GETTY VOCABULARY PROGRAM LOD

GVP well-known and respected in GLAM. Dependencies: AAT-TGN-ULAN-CONA.  
Center of LODLAM cloud? [GVP Training Materials](#) (Diagram by J.Cobb, 2014)

## 6.7.1 GVP LOD RELEASES

AAT 2014-02, TGN 2014-08, ULAN 2015-03. Publicized in blog posts by J.Cuno, head of the Getty Trust

## 6.7.2 ONTOTEXT SCOPE OF WORK

- Semantic/ontology development: <http://vocab.getty.edu/ontology>
- Contributed to [ISO 25964 ontology](#) (latest standard on thesauri). Provided implementation experience, suggestions and fixes
- Complete mapping specification
- Help implement R2RML scripts working off Getty's Oracle database, contribution to Perl implementation (RDB2RDF), R2RML extension (rrx:languageColumn)
- Work with a wide External Reviewers group (people from OCLC, Europeana, ISO 25964 working group, etc)
- GraphDB semantic repo, clustered for high-availability
- Semantic application development (customized Forest user interface) and tech consulting
- SPARQL 1.1 compliant endpoint: <http://vocab.getty.edu/sparql>
- Comprehensive documentation (100 pages): <http://vocab.getty.edu/doc>
- Sample queries (100), including charts, geographic queries, etc
- Per-entity export files, explicit/total data dumps. Many formats: RDF, Turtle, NTriples, JSON, JSON-LD
- Help desk / support on twitter and google group (see home page)
- Presentations, papers. [On the composition of ISO 25964 hierarchical relations \(BTG, BTP, BTI\)](#). Alexiev, V.; Lindenthal, J.; and Isaac, A. International Journal on Digital Libraries, August 2015, Springer.

## 6.7.10 SAMPLE QUERIES (100), INTEGRATED UI

Some charts, eg "Year Joined UN" (TGN), "Pope Reign Durations" (ULAN)

The screenshot displays the Getty Vocabularies: LOD SPARQL interface. The top navigation bar includes the logo, the title "Getty Vocabularies: LOD", and tabs for "SPARQL" and "Queries". A search bar with a dropdown menu set to "Any" and a search button is present, along with a "Brief" dropdown and a "BETA" label.

The left sidebar contains a tree view of categories. Category 5.17, "Popes and Their Reigns", is highlighted with a blue bar and a red circled number (4). Other categories include Family, Language Queries, Counting and Descriptive Info, and Explore the Ontology.

The main content area shows a query editor with a text area containing a SPARQL query. The query is: 

```
1 select ?x ?name ?bio ?start ?end {
2   ?x gvp:agentTypePreferred [rdfs:label "popes"@en];
3     gvp:prefLabelGVP [xl:literalForm ?name];
4     foaf:focus [
5       bio:event [dct:type [rdfs:label "reign"@en]; gvp:estStart ?start; gvp:estEnd ?end];
6       gvp:biographyPreferred [schema:description ?bio]]
7 } order by ?start
```

 Below the query editor are two checkboxes: "Include inferred" (checked) and "Expand results over equivalent URIs" (unchecked). A red circled number (6) is next to the "Expand results over equivalent URIs" checkbox. A blue "Submit" button is located to the right.

Below the query editor, the results section is titled "5.17 Popes and Their Reigns" with a red circled number (7) next to it. It contains a SPARQL query: 

```
select ?x ?name ?bio ?start ?end {
  ?x gvp:agentTypePreferred [rdfs:label "popes"@en];
  gvp:prefLabelGVP [xl:literalForm ?name];
  foaf:focus [
    bio:event [dct:type [rdfs:label "reign"@en]; gvp:estStart ?start; gvp:estEnd ?end];
    gvp:biographyPreferred [schema:description ?bio]]
} order by ?start
```

 A red circled number (5) is next to the query. Below the query, it says "Returns 127 popes. There is one ([ulan:500324155](#) Pius VI) for which the reign is not recorded."

Below the results section, there is a section titled "5.18 Pope Reign Durations" with a red circled number (7) next to it. It says "Let's chart the durations of Popes' reigns." Below this is a SPARQL query: 

```
select ?dur (count(*) as ?c) {
  ?x gvp:agentTypePreferred [rdfs:label "popes"@en];
  foaf:focus [bio:event [dct:type [rdfs:label "reign"@en]; gvp:estStart ?start; gvp:estEnd ?end]].
  bind(xsd:integer(str(?end))-xsd:integer(str(?start)) as ?dur)
```

## 6.7.11 GVP VOCABS USAGE

Collected about 100 usages of the vocabs, many in Collection Management and Search. Many described in [Getty Vocabs: Why LOD? Why Now?](#), J.Cobb, 2014. Eg

- AAT used in [Cataloging Calculator](#): finds bibliographic and authority data: language codes, geographic area codes, publication country codes, AACR2 abbreviations, LC main entry, Cutter numbers, AAT concepts, etc

Bulgarian (culture or style)  
darboukkas (Bulgarian or Yugoslavian drums)  
Bulgarian (language)  
Old Bulgarian  
Bulgarian (transliterated)

Click on any entry above for detailed information and proper usage from the [Getty Art & Architecture Thesaurus®](#)

# 6.8 J.P.GETTY MUSEUM

Working with JPGM on publishing LOD. Considering CIDOC CRM, maybe also simpler ontologies. Hoping to generate R2RML from instance examples like:

## 6.8.1 J.P.GETTY MUSEUM AND WIKIDATA

Discussing making data for Wikidata. WD has 480 Getty paintings, but the Museum has 180k artworks. [WD query](#) shown as image grid

Run Clear 473 Results in 347 ms Display Data updated 2 seconds ago 1:44:27 PM GMT+3, 2016

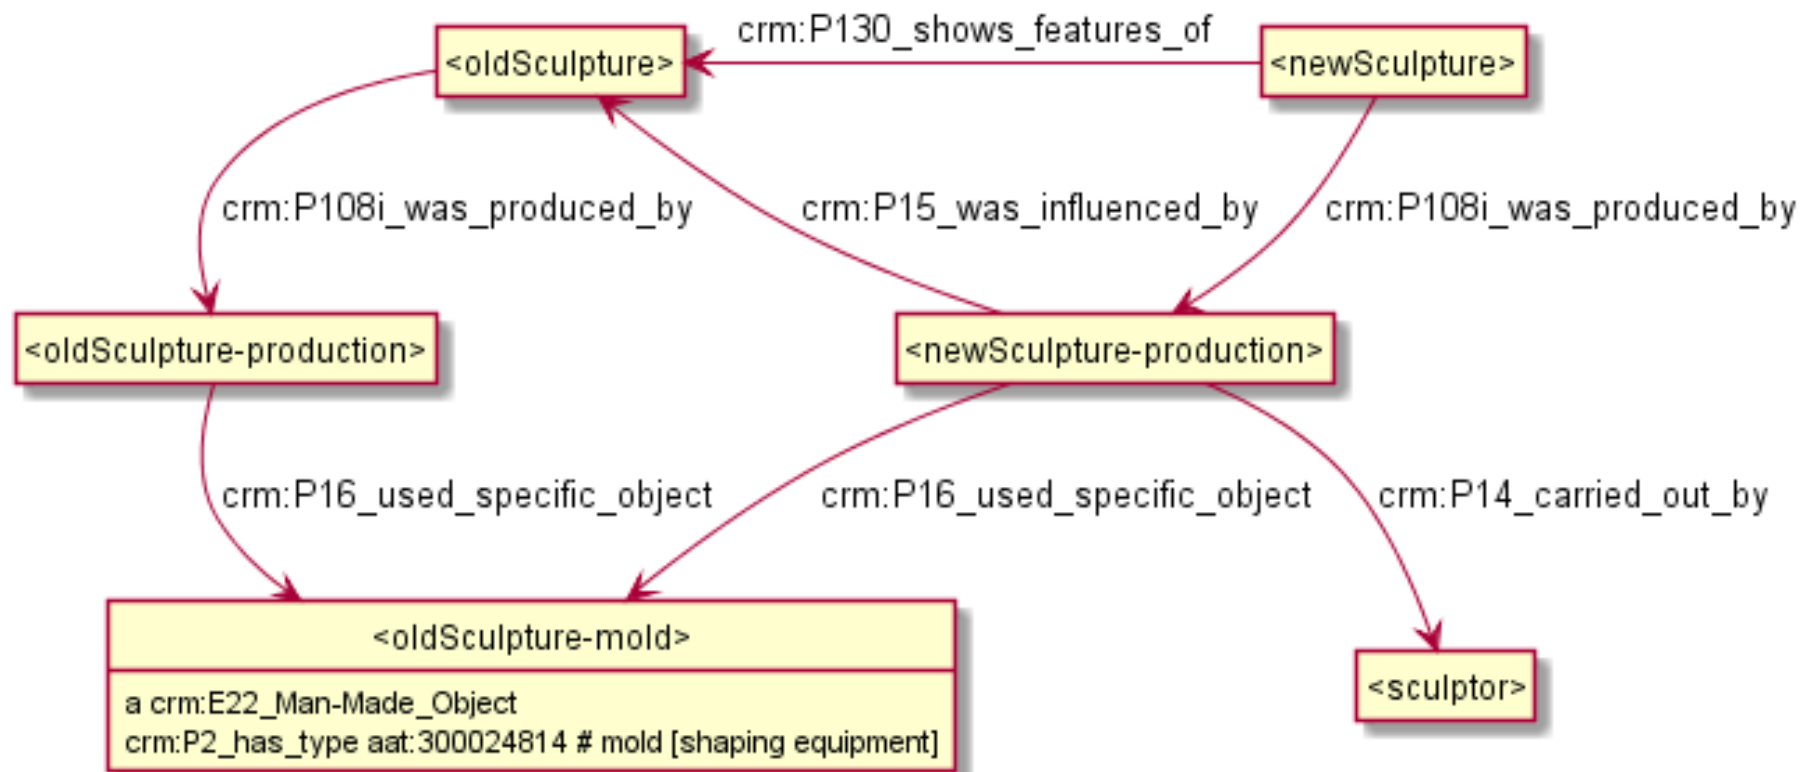

The image grid displays the following artworks and their associated data:

- Bouquet of Flowers in a Vase**  
commons:Courbet, Gustave - Bouquet of Flowers in a Vase - Google Art Project.jpg  
wd:Q20179335
- Classical Landscape with Figures and Sculpture**  
commons:Pierre-Henri de Valenciennes - Classical Landscape with Figures and Sculpture - 2004.145 - J. Paul Getty Museum.jpg  
wd:Q20180879
- The Madonna of Humility**  
commons:After Robert Campin - The Madonna of Humility - 77.PB.28 - J. Paul Getty Museum.jpg  
wd:Q20179133
- Landscape with Ceres (Allegory of Earth)**  
commons:Jan Brueghel the Younger, Hendrik van Balen - Landscape with Ceres (Allegory of Earth) - 71.PB.29 - J. Paul Getty Museum.jpg  
wd:Q20181625
- Aurora Taking Leave of Tithonus**  
commons:Francesco Solimena - Aurora Taking Leave of Tithonus - 84.PA.65 - J. Paul Getty Museum.jpg  
wd:Q20178117
- The Bird Catchers**  
commons:François Boucher - The Bird Catchers - 71.PA.38 - J. Paul Getty Museum.jpg

- John Whetham of Kirklington**
- The Ruins of the Forum**
- The Bird Catchers (partial)**
- Statue of a man**

## 6.9 AMERICAN ART COLLABORATIVE

American Art Collaborative: 14 US art museums committed to establishing a critical mass of LOD on the semantic web. Consulting on CRM mapping.

- Work ongoing at <https://github.com/american-art>, eg see [NPG mapping issues](#)
- Eg possible mapping of "(sculpture) Cast after"

## 6.10 EUROPEAN HOLOCAUST RESEARCH INFRASTRUCTURE

EHRI is a large-scale EU project that involves 23 Holocaust archives (Europe, Israel and the US), DH and IT organizations.

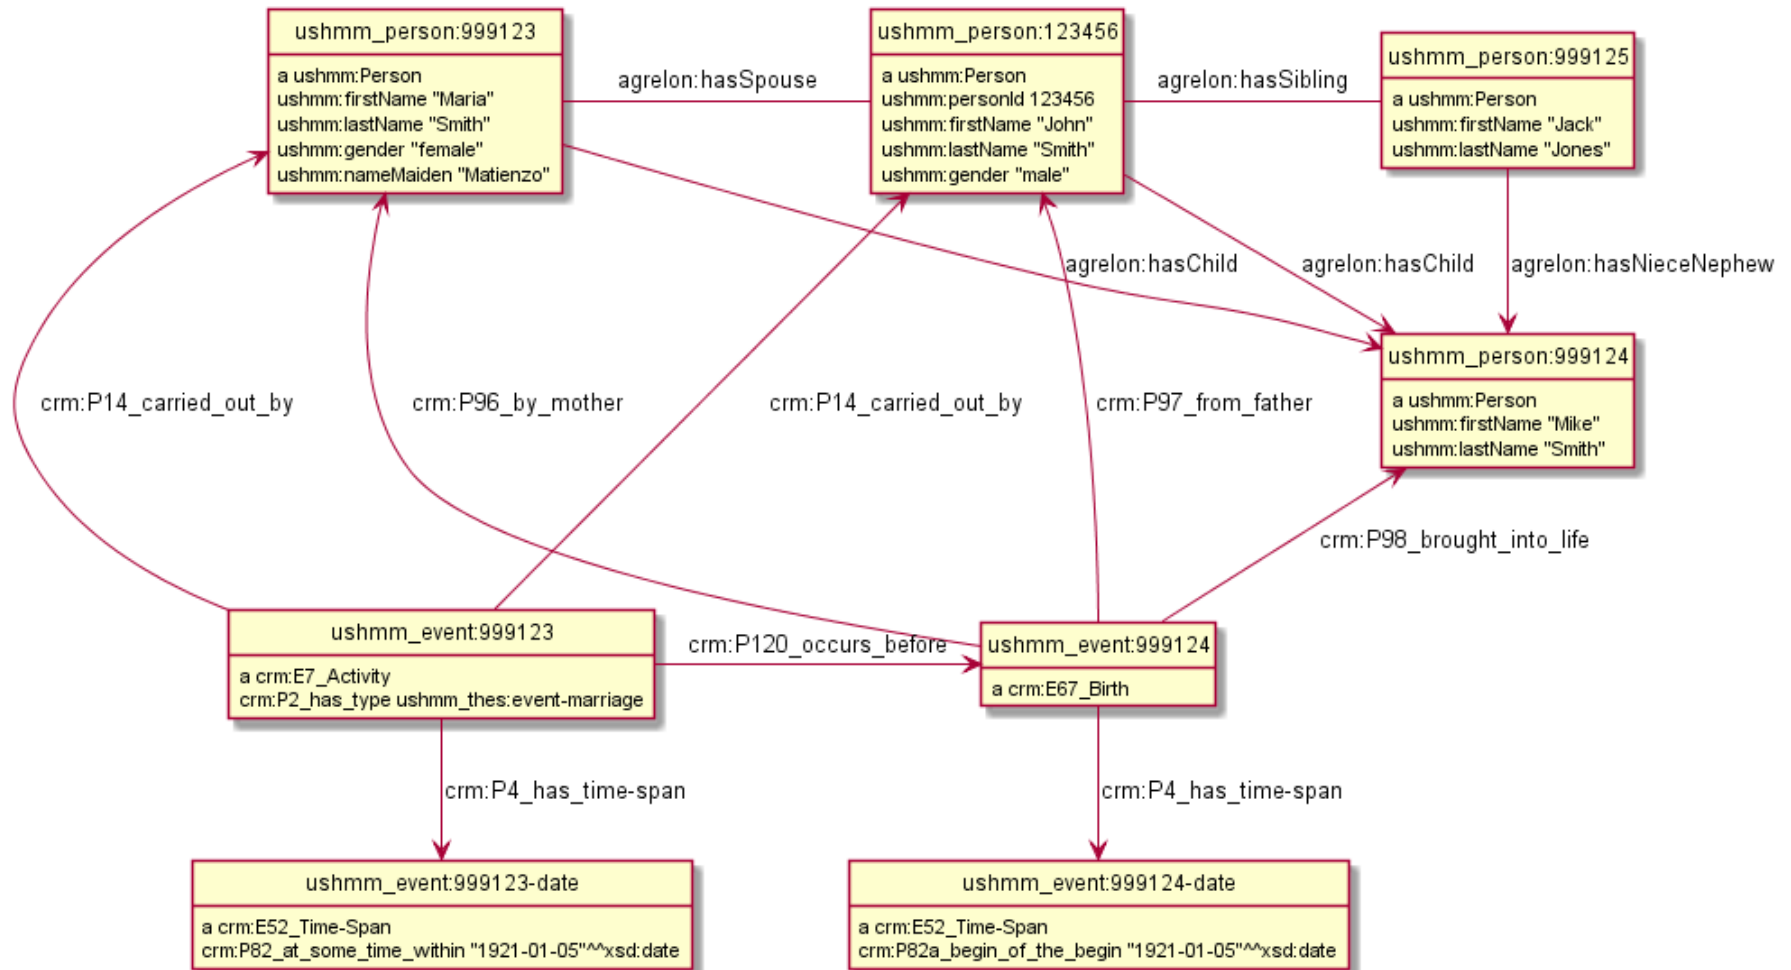

- In its first phase (2011-2015) it aggregated archival descriptions and materials on a large scale and built a Virtual Research Environment (portal) for Holocaust researchers based on a graph database.
- In its second phase (2015-2019), EHRI2 seeks to enhance the gathered materials using semantic approaches: enrichment, coreferencing, interlinking. Semantic integration involves Four of the 14 EHRI2 work packages and helps integrate databases, free text, and metadata to interconnect historical entities (people, organizations, places, historic events) and create networks.

"Semantic Archive Integration for Holocaust Research: the EHRI Research Infrastructure", V.Alexiev, L.Brazzo, CIDOC Congress 2016.

## 6.10.1 EHRI: PERSON NETWORKS

Research question: how person networks influenced chance of survival. Idea:

- Rec 123456: firstName “John”, lastName “Smith”, gender Male, dateMarriage 1921-01-05, *additional names* nameSpouseMaiden “Matienzo”, nameSpouse “Maria Smith”, nameChild “Mike Smith”, nameSibling “Jack Jones”
- We can create Person records for the people mentioned, make some likely inferences, then try to match to other Person records in the database

## 6.10.2 EHRI: LARGE-SCALE PLACE MATCHING

Match USHMM places to Geonames, also achieving deduplication. A Geonames matching pipeline in free text was also developed

ushmm_id	ushmm url	City Town, Country, State Province, County, Place	Geonames URL	Geonames place names

# 6.11 OTHERS PROJECTS: WIKIARTHISTORY

Vienna University of Technology ([site](#), [paper](#))

- Art History networks from Wikipedia, through VIAF id
- Time and nationality from ULAN

## 6.13 NUMISMATICS

My good friend [Ethan Gruber](#) at the American Numismatic Society has developed a host of amazing software that uses and produces LOD.

- Numishare: Data platform for coins/medals, 100k coin types
- Nomisma: Shared authorities for numismatics
- Kerameikos: Pottery LOD
- EADitor: EAD Editor: based on XML & XForms, uses/produces LOD
- xEAC: EAC/CPF Editor: based on XML & XForms, uses/produces LOD

## 6.13.1 COINS IN TIME AND SPACE

Spatiotemporal distribution of hoards containing a particular Roman Republican coin type. Below: examples of this type in partner collections

Date: 45 B.C.

Object Type: Coin [↗](#)

Manufacture: Struck [↗](#)

Denomination: Denarius [↗](#)

Material: Silver [↗](#)

Authority

Issuer: (Lollius) Palicanus [↗](#)

Geographic

Mint: Rome [↗](#)

Obverse

Legend: LIBERTATIS

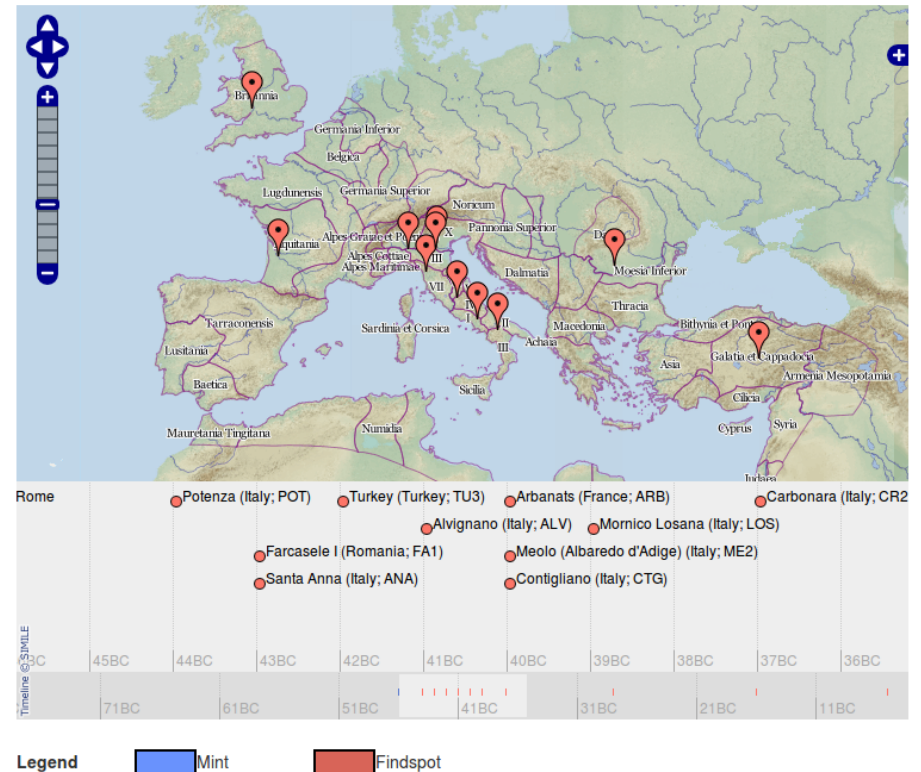

Type: Head of Libertas right. Border of dots.

Deity: Libertas [↗](#)

Reverse

Legend: PALIKANVS

Type: Rostra, on which stands subsellium (Tribune's bench) . Border of dots.

### Annotations

#### 1. [Edward T. Newell hoard notebook, undated](#)

**Sections** 178

**Creator** [Newell, Edward Theodore, 1886-1941](#)

**Abstract** Notebook containing notes on coins of various hoards, along with loose leaves with additional coin lists, notes, and rubbings. A detached label once adhered to the cover of the album reads, "HOARDS II." Includes a letter to Margaret Thompson from Martin Price of the British Museum relating to a joint project on the coins of Alexander the Great (1968). Hoards covered in the notebook are Sardis, Anadol, Aleppo, Ankyra, Aintab, Andhritsena, Abu Hommos, Taranto, Bithynian, Demanhur, Chalcis (Eretria), Calabria, Constantinople, Cyprus (Larnaka), Peloponessos, Drama, Greece (Tiffany), Eretria, Epidauros, Sparta, Patras, Gesou, Haiffa, Prof. Haynes, Saida, Jandolo, Anadol, Kuft, Kyparissia, Keleler, Karditsa, Messene, Larnaka, Lamia, Latakia, Mosul, Marasesti, Patras, Parthian, Philip II Staters, Ravel, Salonica, Sophikon, Taranto, Tripolitsa, Thebes, Urfa, Gejou, Lamia, and Kyparissia.

## 6.13.6 STATISTICAL CHARTS

Denominations issued by Augustus, Tiberius... rendered in a chart using d3js

Quantitative Analysis

## 6.13.7 KERAMEIKOS: POTTERY LOD

Kerameikos Project editor. Based on XForms, leverages Getty and BM LOD

The screenshot displays the 'Edit ID' interface for the entity 'Kleitias'. The main form includes a 'Save' button at the top right. On the left, there are sections for 'Controls' (Labels/definitions, Relations, Miscellaneous) and 'Import' (Dbpedia Labels, British Museum, Getty ULAN, VIAF URIs). The 'Edit ID' section shows the 'id' field with the value 'kleitias' and its URI '(http://kerameikos.org/id/kleitias)'. Below this, the 'Person' type is indicated. The 'Labels and Definitions' section contains a table of labels in various languages:

skos:prefLabel	Label	Language	Action
skos:prefLabel	Kleitias	English	X
skos:prefLabel	Kleitias	Polish	X
skos:prefLabel	克利提亚斯	Chinese	X
skos:prefLabel	Cleitias	Dutch, Flemish	X
skos:prefLabel	Kleitias	Italian	X
skos:prefLabel	Kleitias	German	X

The 'Relations' section shows 'skos:definition' and 'skos:exactMatch'. A 'Query Getty' dialog box is open, showing a search for 'Kleitias' with a 'Search' button. The results table is as follows:

Select	Name	Id	Description	Type
<input checked="" type="checkbox"/>	Kleitias	<a href="#">500089125</a>	Considered a master of early black-figure painting, Kleitias was a miniaturist whose figures are not ...	Exact Match

An 'Add Selected' button is located at the bottom of the dialog box.

## 6.13.8 EADITOR AND XEAC

Blog, Wiki. Based on XForms. Leverages the Getty thesauri and VIAF, imports data as needed
